ABOUT

A Programmer based in Iran-Tehran. cares about customers and products & loves minimal design.

My main responsibility is the users' happiness and comfort. I'm trying to make everything look great. My job is to create a smooth and enjoyable experience through design and implementation, and I'm always perfecting my ability to do so. My journey started from creating a website design and implementation startup.

I am a **Ui Engineer**, which means someone who can both design and implement Ui.

SKILLS

Ui Designing

User interface design - Typography - Wireframe - Prototype - Visual design - Design system and etc.

Tools: Adobe XD, Figma, Adobe Illustrator, Adobe Photoshop

Mobile and Web-based user interface design from wireframe design to prototype design and design systems with new methods and trends, that fully reactive and completely user experience based.

Front-End Developing

Any web-based applications, SPA

Tools: HTML, CSS, SASS, Javascript, GSAP frameworks, JQuery, Angularjs, React, Webpack, NPM

Web application based UI programming and using the latest and best ways to develop a web application.

Alongside these, I am developing a CSS framework for my work that will soon be open source.

Other Skills

Skills that I use for personal projects or for fun and interest.

Tools: Python3, Flask, Selenium, Solidity, Web3, Truffle, Ganache and etc.

Implementation of small services, automation test or automation tasks for easier and faster work or any project that works better in python and Develop blockchain-based projects on the Ethereum platform. Projects like e-voting or wallet etc. that All of this is just to learn and get to know more about all areas of the technology world.

General Skills

Teamwork, responsibility, Timeliness and etc.

Tools: Git, Github, Gitlab, Trello, Discord, Office and etc.

The principles of teamwork, responsibility, collaboration, timeliness and striving to produce a better product should be fundamental to any programming.
