Experience

2019 - 2021
Tech Startup l Nethlands (Remote Job)
Junior Backend Developer

My journey in backend development spans across various roles, each contributing to my expertise in crafting robust solutions. Commencing as a junior backend developer for a dynamic startup from 2019 to 2021, I cut my teeth on the intricacies of backend systems, gaining invaluable experience in database management, API development, and more.
this was my very first job in programming, I learnt a lot of things in this job, this was a tech startup based in netherlands which researched about data mangement, security, cryptography, blockchains, cyber security and many more things.

2021 - 2023
HCL | India (Physical Job)
Senior Backend Developer

I worked as a senior developer here, mainly managing data and security, I gained alot of experience working here about data structure algorithms and improved my skills by a alot, I was a team lead for about 2 weeks until I decided to hand in my notice period and move on to freelancing, I had a great experience working here.

2023 - present day
Freelancer
Programmer

in 2023, I decided to resign from my previous job and become a freelancer, as I wanted to have a bigger impact on society and more financial freedom, in this time I worked on and contributed to a lot of projects, this helped me learn many new things and sharpen my skills and efficiency, and I have to this day been working as a freelancer.
