Current or most recent job title:

software developer

Career goals and objectives:

As a computer science student, I have worked on various projects in different fields, which has given me a broad understanding of the applications of computer science. However, my current career goal is to specialize in graphics development and become proficient in OpenGL programming. I am interested in exploring the intersection of computer science and visual design, and I believe that developing these skills will enable me to create innovative and visually compelling software solutions for various industries, such as gaming, virtual reality, and computer-aided design:

Level of education and where did i obtain it:

I am a baccalaureate student pursuing a Computer Science major in Tunisia. I am currently studying and plan to continue my education to obtain a bachelor's degree in Computer Science. My educational background has equipped me with a strong foundation in programming, algorithms, and data structures, as well as problem-solving and analytical skills. I am passionate about using my skills to develop innovative solutions to real-world problems and

look forward to continuing my education to further develop my knowledge and skills in this field

Technical skills and programming languages that i know:

I have a solid background in programming and a natural ability to quickly learn new technologies. My technical skills include proficiency in programming languages such as C++, Python, and JavaScript, as well as experience with web development technologies such as HTML, CSS, and Node.js. I am also experienced in working with popular frameworks such as React.js and Electron.js, and have a strong understanding of database management using SQL. Furthermore, I am proficient in using design tools such as Qt Designer to create visually appealing user interfaces for software applications. These technical skills, combined with my ability to quickly adapt and learn new technologies, make me well-equipped to take on the challenges of any job in the software development field

Some of the projects that I have worked on and the technical and professional skills that i have developed through these projects

I have experience creating websites for businesses and personal projects, which have allowed me to develop a range of technical and professional skills relevant to the job I am applying for. For example, I created a website for a startup landscaping company called IRRI PRO, which involved designing a user-friendly interface and implementing functionality such as online booking and payment processing. In addition, I have worked on personal projects that

have allowed me to develop skills in areas such as web development, mobile app development, and game development, which can be seen in my GitHub portfolio at github.com/chrony-DevLogs?tab=repositories. Through these projects, I have developed skills in programming languages such as HTML, CSS, JavaScript, Python, and C++, as well as experience with frameworks and libraries such as React.js, Node.js, and Raylib. These technical and professional skills make me a strong candidate for any job in the software development field, particularly in web development or mobile app development

Certifications:

I have received diplomas in web development from GOMYCODE, which have equipped me with valuable skills and knowledge relevant to the job I am applying for. The first diploma I earned was the Introduction to Web Development, which covered the basics of web development including HTML, CSS, and JavaScript. The second diploma I earned was in React.js, where I learned about advanced concepts such as React.js, Redux.js, and more. These diplomas have provided me with a strong foundation in web development, which I have built upon through personal projects and further education. I believe that these certifications demonstrate my commitment to continuing education and development of my skills in the field of web development.

YAHYA BOUHLEL

Accomplishments i have had in my previous jobs that are relevant to the job im applying for

Throughout my career as a software developer, I have acquired a wide range of relevant knowledge and skills that are essential to the job I am applying for. My background in cyber security has provided me with insights into the different techniques used by attackers, enabling me to write more secure code and develop systems that are well-protected against cyber threats. In addition, my experience with programming languages such as C and C++ has taught me how to write optimized and functional

Moreover, my proficiency in JavaScript has enabled me to build applications for various systems, while my solid background in mathematics has honed my ability to solve complex problems and develop intricate algorithms. I am proud to consider these skills and knowledge to be significant accomplishments and achievements, with my willingness to learn and improve standing out as my biggest accomplishment

My hobbies and interests that are relevant to the job im applying for

During my free time, I enjoy developing mini-games and creating game mods. This hobby allows me to bring my creative ideas to life and has helped me to gain experience with game development tools and technologies. I believe this experience can be relevant to the job or industry I am applying for, as it has helped me to hone my problem-solving and critical thinking skills, which are valuable assets in any technical field
