Profile

I have experience in developing web applications using client architecture with Asp.net, C#, Angular, Entity Framework , WebForm, and WebServices. I have worked with software/tools such as Visual Studio and Visual Code.
I am proficient in object-oriented programming (OOP) concepts and design patterns.

Education

2018/01 – 2022/10   **I hold a Bachelor's degree in Computer Engineering.** *Al-Hussein Bin Talal University*

Courses

2023/02 – 2023/06   **asp.net mvc**
pioneer academy

Professional Experience

2022/08 – 2022/11   **red hat administration**
Optimiza
I have completed training in Red Hat Administration I and Red Hat Administration II. During the training, I gained expertise in various tasks, such as creating and managing user roles, granting permissions for read and write operations, configuring remote access using the web console and SSH, setting up network configurations including IPv4 and IPv6, accessing security files and managing file systems and networks, handling storage devices, logical volumes, and file systems, and managing system security and access controls.

personnel skills

Teamwork

Time management

Results-oriented mindset

Analytical thinking

Effective communication

Skills

html	css
bootstrap	angular
typescript	javascripit
asp.net ,mvc	entity framework
C#	OOP

Projects

Employee

note : every link is repoistry you can access to project after download source code

This web application was created using backend techniques with C# OOP and Entity Framework. It allows users to register and login through a form and enables them to add their information, such as email, phone number, and an image. Users have the capability to update their details by editing their profile, and they can also delete their information when needed.

drink store

This web application includes an order system and a dynamic menu that displays a list of drinks, including both hot and cold options. The website also has a register page, login functionality, and log out feature for users.

shop store

I have created a webstore using frontend and backend techniques, incorporating HTML, Bootstrap, and OOP in C#. The website features a list of products such as food, mobiles, t-shirts, and laptops, along with engaging animations. Additionally, there is a register form, login, and log out functionality for users. Admins have special privileges allowing them to add, delete, and update products.
