SUMMARY

Experienced Full Stack developer with a strong background in designing and implementing end-to-end web applications.

Skilled in developing responsive and user-friendly interfaces, optimizing application performance, and integrating APIs.

With 7+ years of experience, I have successfully delivered projects across various industries, collaborating with cross-functional teams to meet client requirements and deliver exceptional results.

I have a proven track record of building scalable and robust applications, ensuring high code quality and adherence to best practices.

I am highly skilled in problem-solving and have a strong attention to detail, allowing me to identify and resolve complex technical issues efficiently. I am constantly staying updated with the latest industry trends and technologies, continuously enhancing my skill set to deliver cutting-edge solutions.

I thrive in fast-paced environments and excel at managing multiple projects simultaneously while meeting tight deadlines. I am a proactive communicator and a team player, fostering positive collaborations and driving successful project outcomes.

EXPERIENCE

Application Developer

Upwork(Remote) 📅 2016.3 – 2018.10

- Participated in the designing and development of software using agile development practices Performed the research and development tasks to design and implement new components Created automated diagnosis, testing and debugging modules.
- Coordinated with project teams and end users for identification of application requirements.
- Supported technical team members in conducting the feasibility analysis on future software projects.
- Provided technical assistance for evaluation and suggestion of application software and integration tools.
- Assisted in troubleshooting and resolution of software problems along with further enhancements.

ACHIVEMENTS

Customer Satisfaction

Customer Satisfaction is primary key of my goals. I've completed 6+ medium to huge scale projects that increased user-friendliness, speed up, met the customers' requirements and delivered on time.

🤝 Clear Communication & Collaboration in Team work

Leading and collaborating with developers in a team by communicating clearly and consistently.

🚀 Cost-effectiveness

I love agile development method and focus on delivering cool stuff and most efficient way to fulfil the objectives.

SKILLS

TYPICAL PROJECTS

Job Site Development like Upwork (using Laravel Framework)

🔗 www.ijobdesk.com

It is Huge Project using PHP Laravel Framework that you can do Job Posting and Hiring developers, just like Upwork.com. iJobDesk is online job site to support their buyers and sellers to work together remotely. It has been built on Laravel framework (latest version). Buyers can easily hire freelancers and work together.

- Designed architecture of the project and huge Database structure to handle user management, activities and transactions. Documentation Job.
- Implemented core modules, models, controllers, providers, commands, observers, basic libraries and APIs to run the huge system from scratch. Played role of Lead Developer.
- Implemented RESTful APIs for a tracking tool, and integrated 3rd party modules, APIs.
- Integrated payment gateways such as Paypal, Payoneer, Stripe, Credit Card and Bitcoin.
- Git version control for entire project, branching, committing, pushing, pulling requests and merging.

Podio APIs Development (using React, Symfony Framework)

🔗 www.podio.com

Patio is a web application that tries to measure the happiness of a given team periodically by asking for a level of happiness between Very bad and Very Good.

- Developed frontend using React / Hooks, Typescript and implemented RESTful APIs.
- Worked on building the APIs and interfaces to communicate apps and implementing MVP architecture for Agile Development.
- Worked on integrating third party libraries integrations.
- Worked on providing the best user experience and making the app work for multiple screens.
- Implemented Task Management related modules.
- Created CI/CD on AWS CodePipeline.

House Manage System (using Next.js and Nest.js Framework)

 brotherhoodhouse.com

Brotherhood House is where aspirations meet understanding, where shared dreams find collective strength. Here, you don't just find housemates – you discover allies, mentors, and friends.

- I have developed huge database structure that efficiently organizes and stores vast amounts of information. This database structure allows for seamless data retrieval and analysis, enabling businesses to make informed decisions based on accurate and up-to-date data. Additionally, the structure is designed to scale and accommodate future growth, ensuring that it can handle increasing data volumes without compromising performance or efficiency.
 - Integrated payment gateways such as Paypal, Payoneer, Stripe, Credit Card and Bitcoin.
-

TripleOgame NFT website Development (using React, Solidity)

 <https://triple-ogame-frontend.vercel.app>

TripleOgames is a group of veteran game, technology and innovation developers who love to bring new, innovative and disruptive ideas through meaningful entertainment and gaming experiences, creating high-tech solutions that we implement in high quality games.

- Developed NFT market place using React / Hooks, Typescript and implemented RESTful APIs.
 - Worked in the backend team of Opensea.
 - Designed and developed Nft marketing, blockchain protocols, smart contracts payment gateways with mutiple chains such as Ethereum, BSC, Polkadot, Solana, Polygon, Chromia among others.
 - Implemented Task Management related modules.
 - Created CI/CD on AWS CodePipeline.
-

Hope In Tranuma Mobile App Development (using React Native)

 <https://play.google.com/store/apps/details?id=com.hopeintrauma.asha>

Hope In Tranuma is a platform to bring hope and freedom to women who have been abused and give them tools to help them overcome their pain, hurt and trauma.

- Developed frontend using React Native, Typescript and implemented RESTful APIs.
 - Worked on building the APIs and interfaces to communicate apps and implementing MVP architecture for Agile Development.
 - Developed backend using Nest.js, PostgresSql.
-

Coin7 Mobile App Development (using React Native)

 <https://play.google.com/store/apps/details?id=com.coin7>

Coin7 is a project, that aims to revolutionize the trade of goods and services by building the world's first marketplace based on cryptocurrencies.

The project provides a secure, fast, and cost-effective alternative to traditional payment methods..

- Developed using React Native, Typescript and implemented RESTful APIs.
- Worked on building the APIs and interfaces to communicate apps and implementing MVP architecture for Agile Development.
- Developed backend using Node.js MongoDB.
