Azadeh Fazlolahi
Co-Founder and PM at Mahda
Tehran Province, Iran

Summary

I studied engineering before, but I realized that economics and finance are more attractive to me. When I entered the financial field, I became interested in algorithmic trading. Being able to have my own business was very attractive to me, and that's why I started the idea of Mahda and trying to build it. Mahda is now a company that works in the field of asset management with the help of artificial intelligence and data analysis. I like the startup world in addition to its ambiguity and difficulties because it creates an attractive future in my mind. At Mahda, I do various things in the field of research and development and product management, and I hope that the goals I have in mind will be realized with Mahda :)
