

WEBFLAX

All you need for a platform

Who we are?

Webflax is the result of a transformational and aesthetically oriented mindset. The group entered the field of international trade in 2010, and from the very beginning, with a revolutionary approach in the field of software design and development, has been able to remain steadfast in this path to this day. webflax offers a complete package of services. This means that with the benefit of the best experts, we offer our customers unparalleled services, a complete creative agency. A comprehensive and principled plan to implement what you have in mind. If you need a unique website or software, we support you to achieve all our common goals.

We will surprise you!

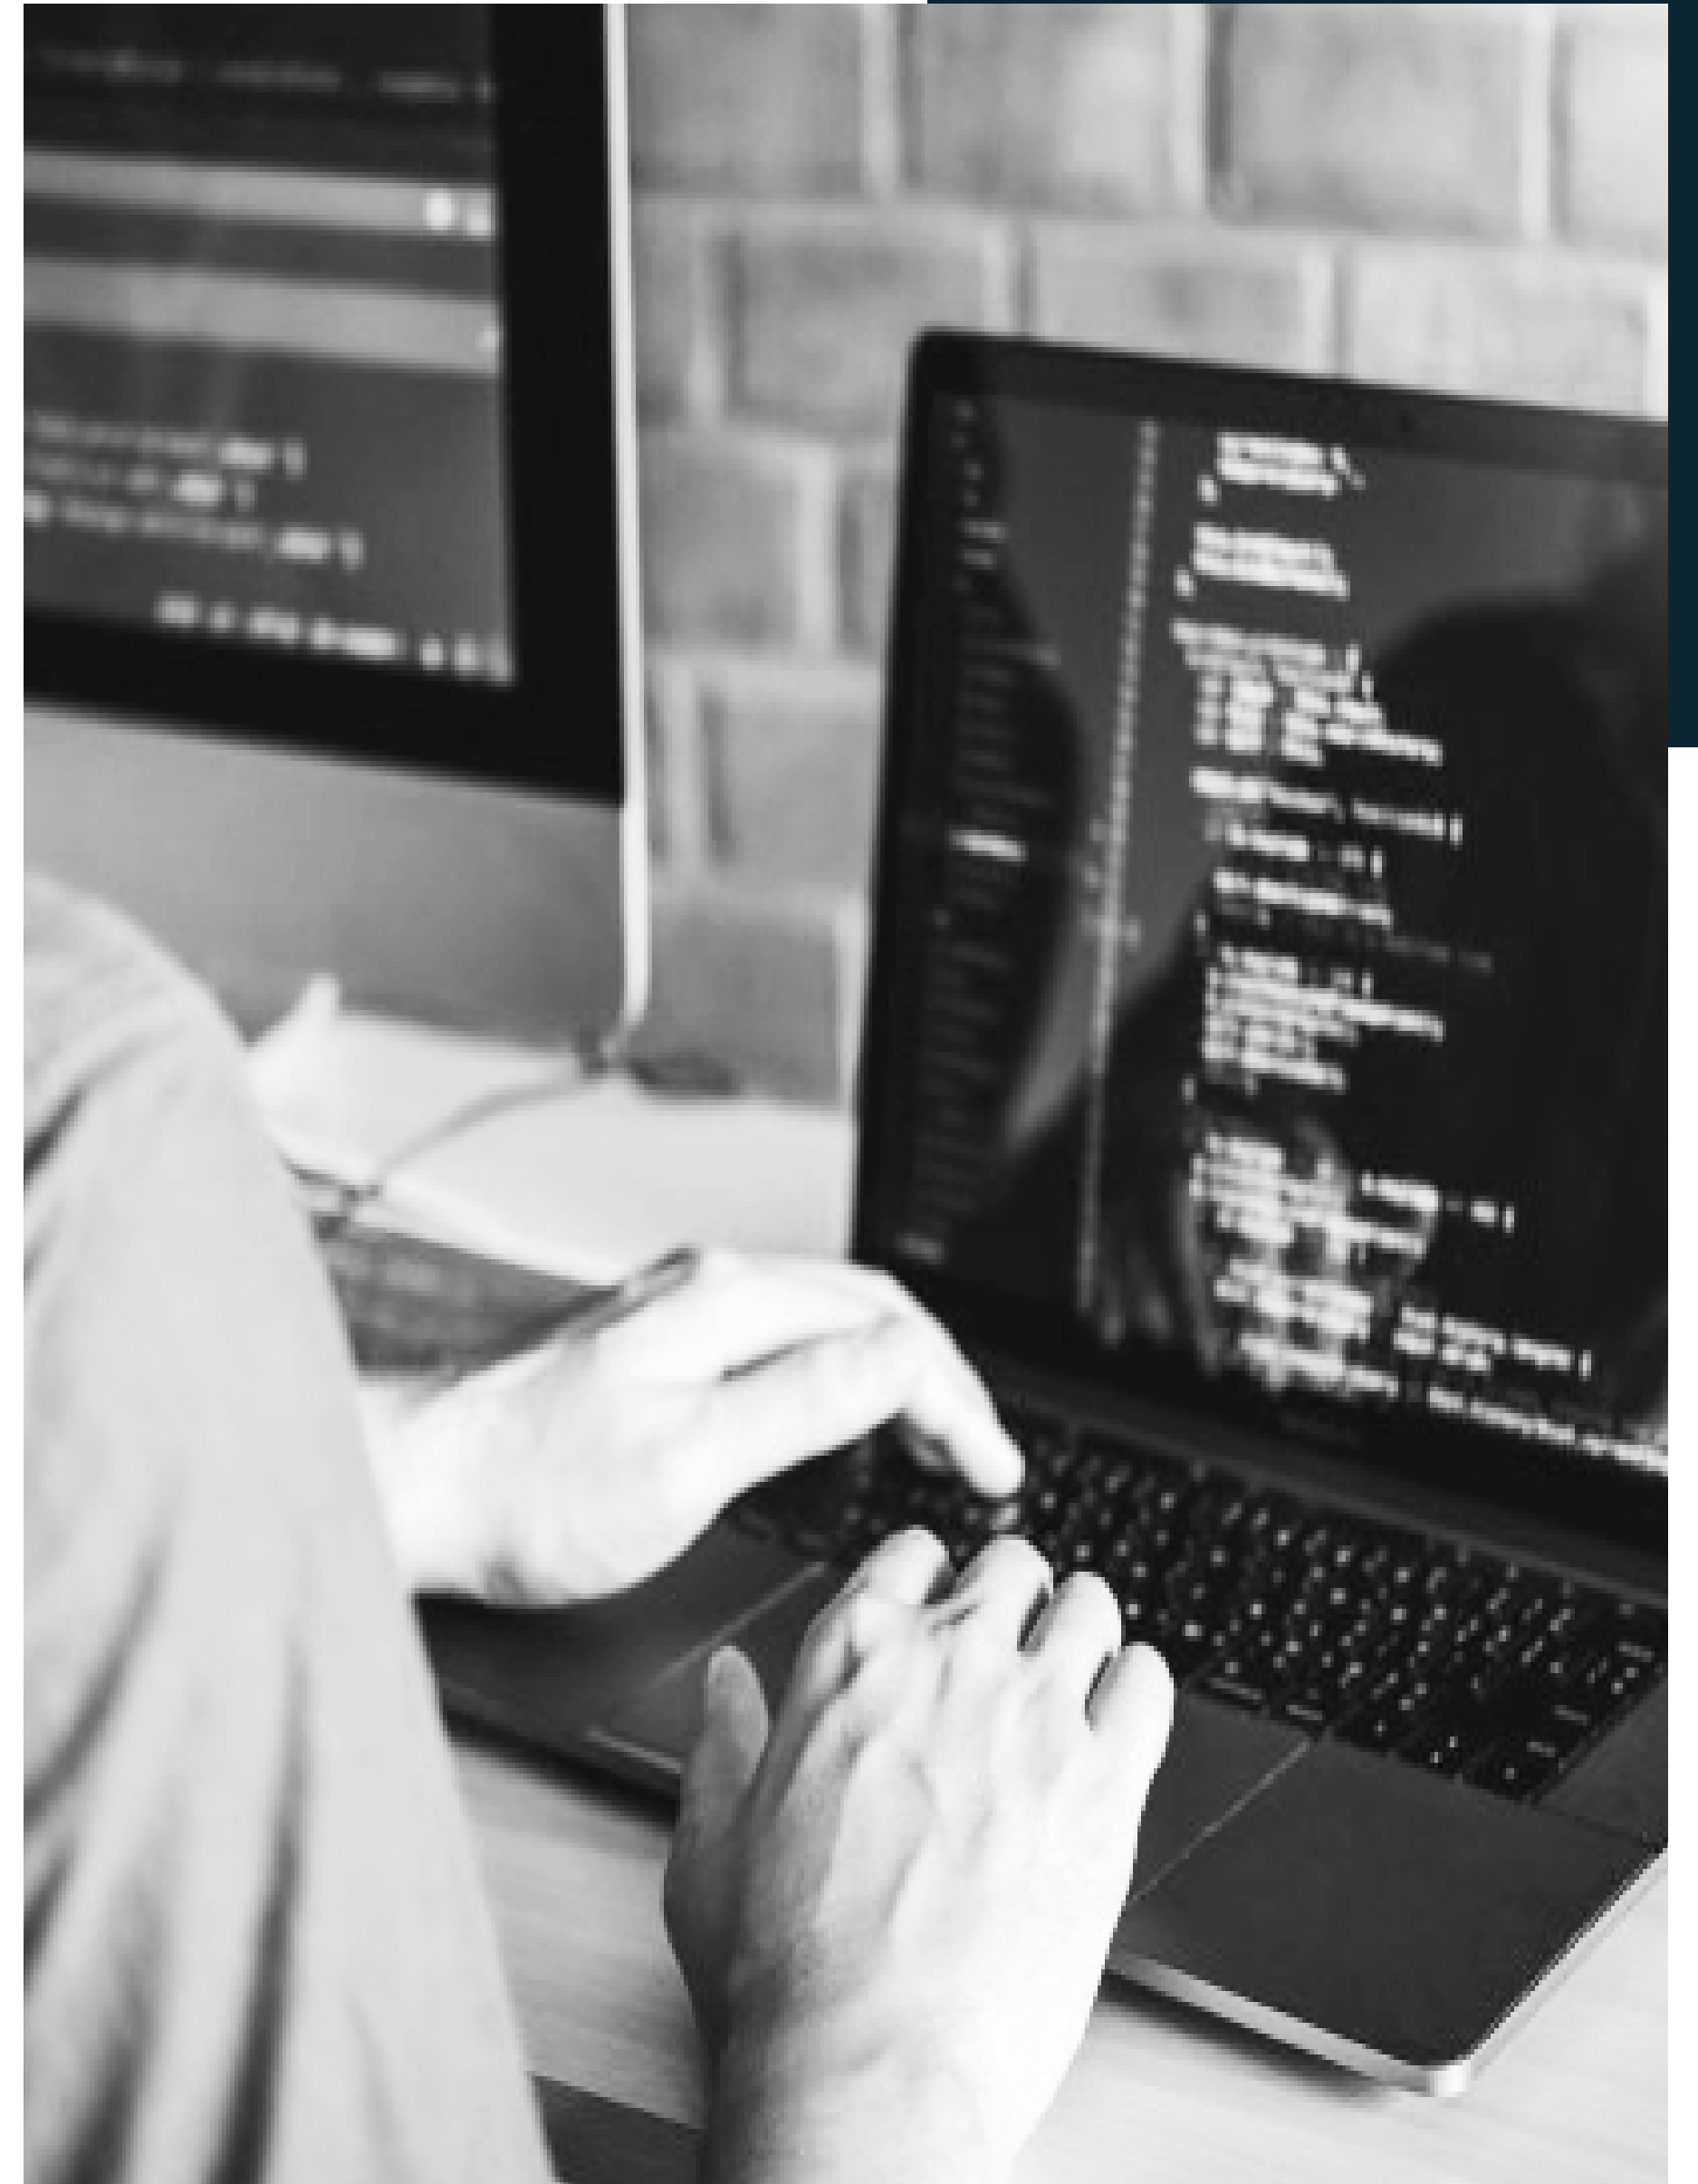

Hello world!

Bring your idea to the life

An idea is a kind of invention and a mental spark! This type of innovation should not have many restrictions. On the other hand, unlimited freedom also hinders creativity! So what is the task? You have to think freely within a certain range. Ideation and creativity get better and better with practice. For teaching how to think (with an emphasis on creativity), the

following strategies can be used:

- Creating curiosity about a particular topic;
- Invite everyone to participate in discussions;
- Encourage learners to "think deeply" about the subject;
- Defining a clear and transparent goal or program;
- Outline the various aspects and dimensions of the issue and examine the views;
- Inspire people through possible thoughts.

Technology we use

Laravel is a PHP language framework designed for MVC-based web application development. By facilitating routine tasks such as authentication, routing, sessions, working with databases, and used in almost all we projects, Laravel reduces development issues for both the developer and the client.

Codes written with the Vue.js framework can be used in any other project. More than %81 of developers have stated that this Vue.js feature is the most important reason for them to use this framework. Vue.js is also smaller and faster than React Native and Angular.

Python is a high-level programming language interpreted for general programming. Python has a dynamic type system and automated memory management and supports multiple programming paradigms. Python Interpreter is available for many operating systems.

Kotlin is an alternative to the Java language, offering many advantages over Java for JVM and Android developers, and simply competes with Java in similar projects.

Graphic Designer

Sorosh Tanzadeh
Frontend Developer

Pedram Davoodi
Backend Developer

We are here to make your portfolio website

Purpose

To design your website, ask yourself, "What do you want to say to your employer? "

UI/UX

Beautiful graphical interface is a great item, but if you want to look unique among different people, you also need to show your problem-solving abilities and operations.

Attention

Try to get the user's attention at the very beginning. Some employers and people who hire you take 5 to 10 seconds just to see if they can invest in you.

Respect

Remember that attention is the most important point, so make sure you display your best and most relevant work.

Contact

Make it easy for users to connect with you, this is possible by placing a contact form with me or using links from other communication channels.
