## SKILLS

- Java
- Kotlin
- Java Collections
- Spring Framework
- Hibernate
- MongoDB
- PostgreSQL
- REST
- WebSocket
- Git
- Linux
- Swagger
- Maven
- HTML
- CSS

## COURSES

**Udemy:**  
**Spring for beginners**

by Zaur Tregulov

**Udemy:**  
**Advanced Java**

by Neil Alishev

## ABOUT ME

I have over 1.9 years of experience in building applications with adherence to the Object Oriented and SOLID principles, using Spring Framework ecosystem and design databases on Postgresql and MongoDB.

## EXPERIENCE

**Java Developer | April 2022 - Now**

Sigma Digital Solutions  
St. Petersburg, Russia

During my time at Sigma Digital Solutions, I've been working on two web applications with foundations in Java 11 and Spring Boot. My first project is a rental service for yachts where clients can choose every boat they like and rent it for their purpose. While building this app, I gained hands-on knowledge of MongoDB and Querydsl, developing logic for a rental calendar where milliseconds are crucial and a price calculator which counts the sum of the trip depending on the day of the week, hours, and holidays.

The second project is a dating application. In this project, I learned how to use GridFS to manipulate large files stored in the database and how to work with WebSocket to implement it in the client's chat and notifications sent.

**Trainee | February 2022 - April 2022**

Deutsche Telekom IT Solutions  
St. Petersburg, Russia

I worked on the pet project under my mentor's guidance, the task was to create an application modeling a work of the information system of an online store.

The final result is a multi-user client-server application with a network connection. Every client can load some data which is synchronized with the server after every alteration.

Technologies used:

- Java 8
- Spring Boot
- Spring Security
- Spring Data JPA
- PostgreSQL
- Thymeleaf
- Bootstrap

## LANGUAGES

### Russian

Native

### English

Upper Intermediate

### Junior Java Developer | May 2021 - January 2022

#### TSUM

St. Petersburg, Russia

I worked on an internal system for warehouse workers to account incoming and outgoing goods.

Among other day-to-day tasks, my main routine as a junior developer was simple SQL requests writing, expanding existing forms for accounting by adding new fields and checking if all were working correct, creating mass mailings for workers about internal updates, unit testing, etc.

### Trainee | December 2020 - May 2021

#### Hyperskill

St. Petersburg, Russia

As a beginner Java developer, I learned the basics of programming by myself using a JetBrains Academy platform. This platform provides some projects to choose from that are separate in stages.

Step by step, I have been learning new concepts about programming and software development technologies while making my projects more sophisticated after every stage by applying obtained knowledge.

What I learned:

- Java Core
- Java Collections
- OOP
- SQL queries
- Unit testing
- Git
- Concepts of computer science
- IntelliJ IDEA
