Summary

I'm an innovator who sees automation possibilities all around me. Solutions and ideas come to me like pieces of an impossible puzzle with answers falling into place: so becoming an engineer was an easy career choice to make. I pride myself in being able to see remedies where others have not.

Life looks like HORSE RACE and it made by moment-by-moment choices.

My favorite aspect of this industry is that hardware and software are always changing, leading to more new and creative solutions to everyday issues. I pride myself in getting the job completed, and my forte is doing it with honesty and integrity. I can recognize previously written code errors and present them along with the solution to repair them.

While I enjoy opportunities to resolve issues independently, I gain a lot of knowledge and perspective from bouncing ideas off my coworkers. I believe problems are not an individual challenge and that we're all in it together to get the job done while impressing the client and strengthening the company's reputation with superior coding.

“Carpe diem” I always say... Getting the job done, finding ways to amaze the client, and saving money for the company is a great way to spend a day!

Let's Connect.

Experience

🏠 ★ Senior Full Stack Engineer

ComCom – CTO

Oct 2023 – Current

- Manage & Lead development
- QA test, code review, Assign task
- Server operation manage

Technologies: Angular.js, Java Spring, MySql, github CI/CD pipeline, AWS, Jira

🏠 ★ Senior Full Stack Engineer

MotoCoders – Full time

Feb 2021 – August 2023

- Collaborated with teams to increase unit tests coverage from 50% to 80% to strengthen app reliability.
- Drove adoption of micro-frontends by breaking out of existing monolithic structures and raising awareness through evangelization and documentation.
- Resolved team's tech debts, completed heavy tasks, and made positive contributions across teams.
- Applied consistent human-readable coding practices and 508 standards to provide better user accessibility.
- Provided regular support, training, and mentoring to fellow colleagues.

Technologies: Angular.js, Flutter, Laravel, MongoDB, Gitlab CI/CD pipeline, Automated Testing, AWS, Jira

☰ ★ **Senior Full Stack Developer**

Heavy buzz, LLC - Contract

Jan 2018 – June 2020

- Built social networks infrastructure like facebook.
- Finally improved old projects codebase quality by using turborepo.
- Restructured the daily closing routine to ensure all team members completed tasks on schedule.
- Incorporated feedback from customers and team members to streamline the social network conflict such as following, like, comments, share.

Technologies: React Native, Laravel, Node.js, AWS lambda, EC2
Azure, MySQL

☰ ★ **Senior Mobile Developer**

RadioHost, Poland – Contract

Nov 2017 – Oct 2018

- Built four mobile radio streaming apps (Radio Host, Gdynia Radio...)
- Implemented new stream module using ExpoPlayer to improve audio quality and optimize data usage in background..
- To provide more user-friendly product, added auto start and sleep feature by specifying time
- Add visual board to show large amount of upcoming agenda and presenter with optimizing image quality fast.
- Implemented secure REST API collaborating with backend developer closely.
- Provided beautiful design ideas and advanced feature improvement.

Technologies: Flutter, React.js, Laravel, Swagger, Jira

☰ ★ Full Stack Developer

PIEXEC, LLC – Full time

Oct 2015 – May 2017

- Developed a dashboard for all the important metric reports using Joomla and Node stream, MongoDB database to show key performance indicators, thus creating an analytical basis for decision making to increase overall performance.
- Worked with the development team of 20 members to create and integrate highly optimized solutions by following agile, test-driven development methodology.
- Introduced PayPal Braintree payment gateway for mobile application, boosting the payment ratio by 16%.
- Created automated personalized notifications for customers from past behavior & increased notification click rate by 15%.
- Awarded 'Employee of the Month' in January 2017 for introducing and developing new UI based customer engagement feature which leveraged 200% growth in engagement.

Technologies: Joomla, Java, Swift, React.js, Node.js, AWS Lambda, MySQL, Jira

☰ ★ Full Stack Developer

Buybitcoins.app – Part time

November 2014 – July 2015

- Built the first fetch pet marketplace app using React Native, Wordpress, MySQL database. To reduce ads loading time and pet media quality, create new recycled list view using React Native bridge.
- Real time post updates feature with firebase real time database.
- Live text chat, voice and video call on the WebRTC technology, firebase real time database, push notification system.
- PayPal, Stripe, Skrill, Bank payment integration, and then cash pick up.

- Provided improvement ideas and beautiful design ideas for more user-friendly product.

Technologies: Java, Swift, React Native, Laravel, Node.js, WebRTC, Firebase real time database, MySQL.

Education

University of Lethbridge (July 2011 – September 2014)
Lethbridge, Alberta, Canada

Master's Degree, Computer Science

Certifications

- Introduction to Programming using HTML and CSS
- IC3 Digital Literacy - Living Online, Key Applications, and Computing Fundamentals

Technical Skills

- Program languages
JavaScript, Java, Swift, Dart, PHP
- Frameworks
React, Angular, Flutter, React Native, Android/iOS Native, Next.js, Laravel, CodeIgniter, Node.js
- CMS
Wordpress, Joomla
- Database managements
MySQL, MongoDB, SQLite
- DevOps
AWS lambda, AWS instance/EC2, Cluster, GitHub/Gitlab/Bitbucket CI/CD pipeline/Automated process
- Agile project managements

Jira, Tara.ai, Trello

- Operating systems

Linux(Mostly used), Windows, MacOS
