PROFESSIONAL SUMMARY

I am a Reactjs Developer having development experience of around 4 years . Am helping my clients build their Applications using Technologies like Reactjs, immutable.js, Redux with integration of API's using Redux-saga. Am a beginner in Blockchain, MongoDB, AWS services and handling auto deployment using github actions, Nodejs, Expressjs. Also Developer/Owner of MERN stack webApp - apirobo.live

SKILLS

Framework

Reactjs, Nodejs, Expressjs, immutable.js

Languages

JavaScript, Beginner in solidity

Technologies

HTML, CSS, Flexbox, Bootstrap, JavaScript, Axios, Fetch,

Tools

VS Code, Progressive Web App, IntelliJ, GitBash, Remote Desktop, GIT actions, Jira.

Cloud

AWS-cognito, Firebase, herokuapp, CloudFlair. GoDaddy.

Middleware

Redux. Saga

DBMS

Beginner in MongoDB and Postgresql

Server

Beginner in Nodejs.

WORK EXPERIENCE

Larsen & Toubro Infotech Limited, Bangalore

Senior Software Engineer

Apr 2022 - Till Date

PROJECTS

Leni (currently working)

Description: The LENI platform allows users to provide data storytelling that is meaningful to the business community. Current implementation allows business users to consume insights from a variety of business sources summarized in easy to view charts and natural language narratives accessed by asking natural language questions.

Responsibilities:

- Customizing amchart as per the requirement.
- Implementing New features in UI as per the requirement.

- Handling Redux to maintain State management throughout the application.
- Training Juniors to handle React and Redux workflow.

3K Technologies, Bangalore

Software Engineer

Jan 2021 – Apr 2022

PROJECTS

EagleAi dashboard

Description: EagleAi dashboard is a web app developed in React js where users can check stock market rates displayed in high charts. Also with several filters users can make risk analysis of the stock rates.

Responsibilities:

- Created a React js Project from scratch.
- Maintained Redux store for Centralized state management system.
- Made use of Redux-saga for API fetch calls.
- Integrated immutable.js for processing of variables in Redux State
- User authentication is achieved using amazon-cognito-identity-js & AWS-Cognito
- JWT token used for authentication of API's
- Integrated and modified 3rd party Libraries as per requirement.
- Involved in management roles to get work completed from co-workers and fixing periodical status meets.
- Involved in fixing daily Scrum sessions with Client to keep them up to date on project status.

PROJECTS

RDS (uPath)

Description: uPath is a web application, it is integrated with different microservices like Config, Metadata service, image upload, tiles, WSA, and ROI services.

Responsibilities:

- Involved in UI Bugs fixing, which were encountered at the time of migrating application to cloud.
- Involved in daily Scrum sessions.
- Involved in manual testing and code review.
- Involved in the deployment cycle of code using Jenkins and Helm commands.
- Provided front-end development support through the entire project life cycle.
- Knowledge Transfer sessions and created wiki pages to support team members.

PROJECTS

reviewerrecommendation.com

Description: Project was initiated to build a dynamic React js web app from scratch. The website helps Educational Research Students to upload their research papers and get reviewed by the Institution.

Responsibilities:

- Created a React js Project from scratch.
- Maintained Redux store for Centralized state management system.
- Made use of Redux-saga for API fetch calls
- Integrated immutable.js for processing of variables in Redux State
- Involved in manual testing and code review in GIT.
- API call JSON response is integrated with the application
- Meet business objectives by strategizing effective solutions.
- Plan and implement all stages of projects.
- Select the most effective approaches and processes.
- Use cutting-edge technical knowledge to come up with innovative solutions.
- Assigned tasks and monitored performance of UI developers.
- Communicated with the team to keep them up to date on project status.

Mobigraph, Bangalore (Client of Thalir Technology)

Front End React Native Developer

March 2020 to December 2020

PROJECTS
