My journey in backend development spans across various roles, each contributing to my expertise in crafting robust solutions. Commencing as a junior backend developer for a dynamic startup from 2019 to 2021, I cut my teeth on the intricacies of backend systems, gaining invaluable experience in database management, API development, and more.

Transitioning to a senior backend developer role at HCL from 2021 to 2023, I embraced larger-scale projects, leading teams and spearheading innovative backend solutions. During my tenure, I honed my skills in diverse technologies, including Node.js, Python, and beyond, ensuring seamless integration and optimal performance.

Since 2023, I've embarked on a journey as a freelancer, offering my expertise to clients worldwide. Specializing in backend development, I bring a wealth of experience and versatility to every project. Whether it's architecting database schemas, designing robust APIs, or implementing scalable solutions, I thrive on the challenge of delivering excellence.

My proficiency extends across multiple languages and frameworks, including but not limited to Node.js and Python. Additionally, I am well-versed in technologies such as Express.js, ensuring rapid development without compromising quality.

As I continue my freelancing journey, I remain committed to exceeding client expectations, delivering tailored backend solutions that drive success. Let's collaborate and elevate your project to new heights!
