Business registration

Business registration center is a response to the needs of the business community of the Republic of Belarus. We will help new entrepreneurs to make the first step, and for experienced ones - to strengthen their position in the market. Forget about formalities! Trust our knowledge and experience!

[Send request](#)

Legality and transparency

Without it we cannot talk about quality services. We act exclusively in the legal field of Belarus on clear terms!

Turnkey business registration

The only thing you need from the customer is a desire to cooperate. The rest is the responsibility of our specialists!

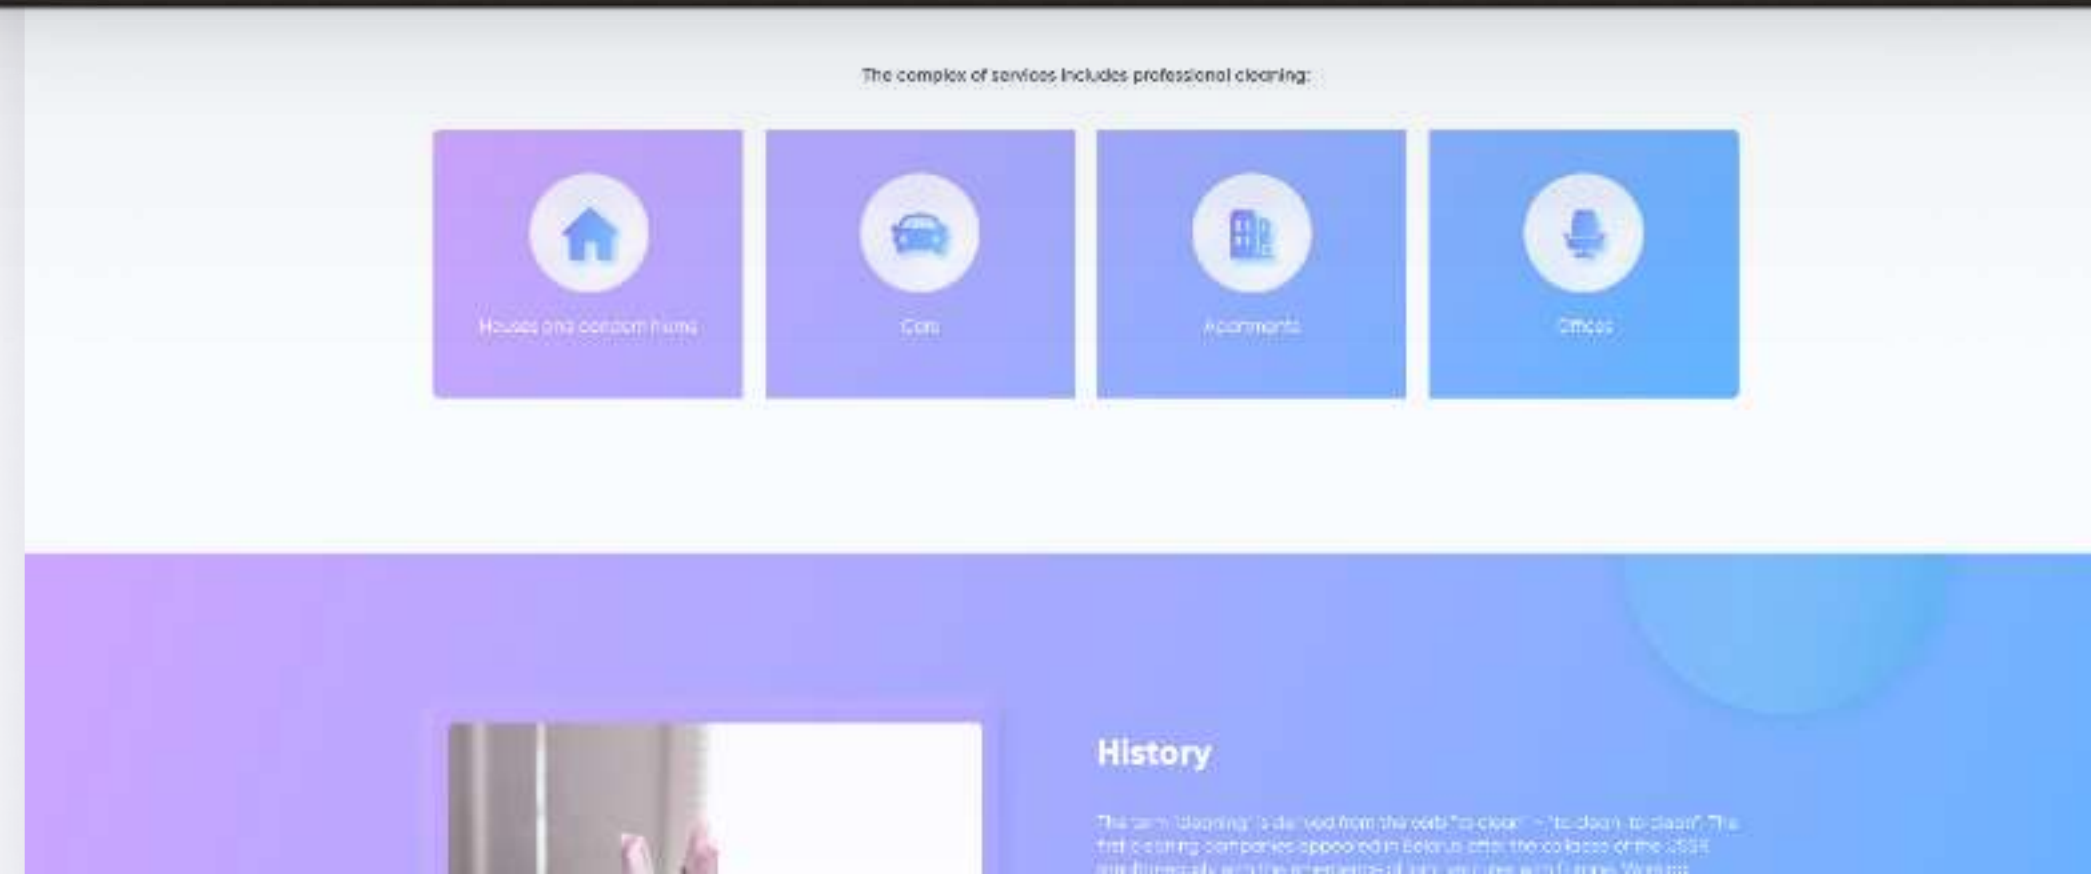

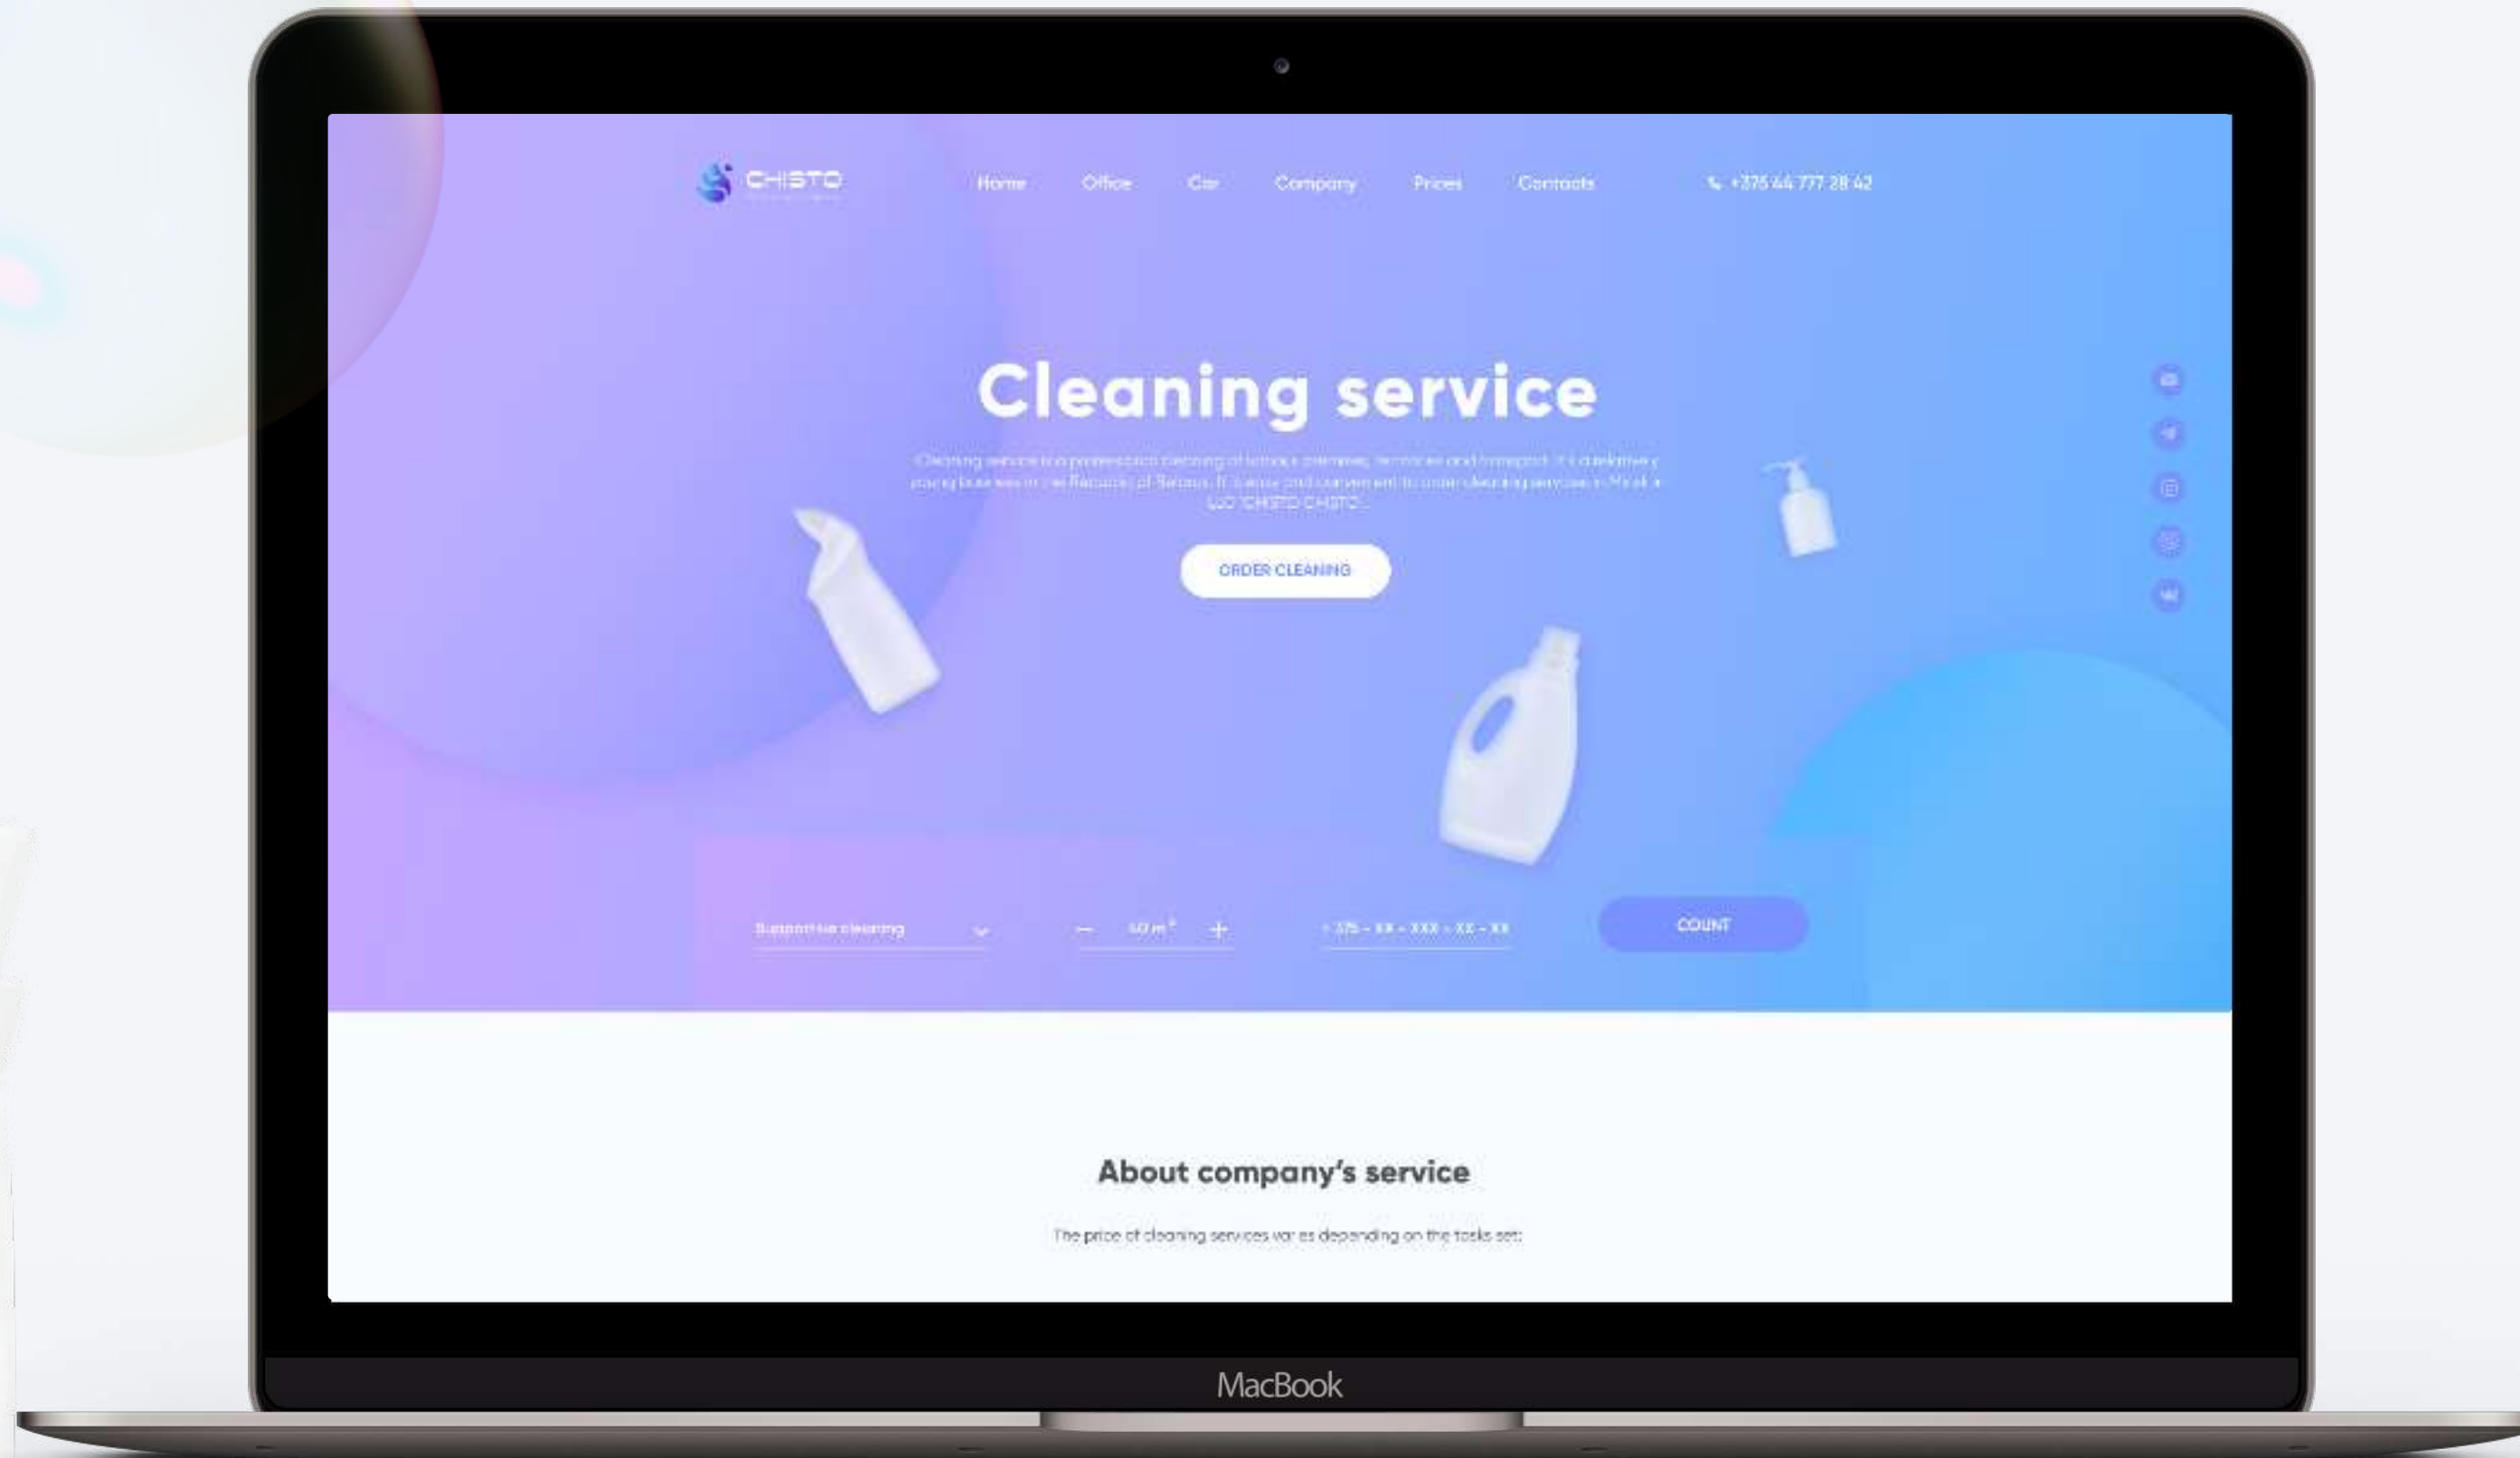

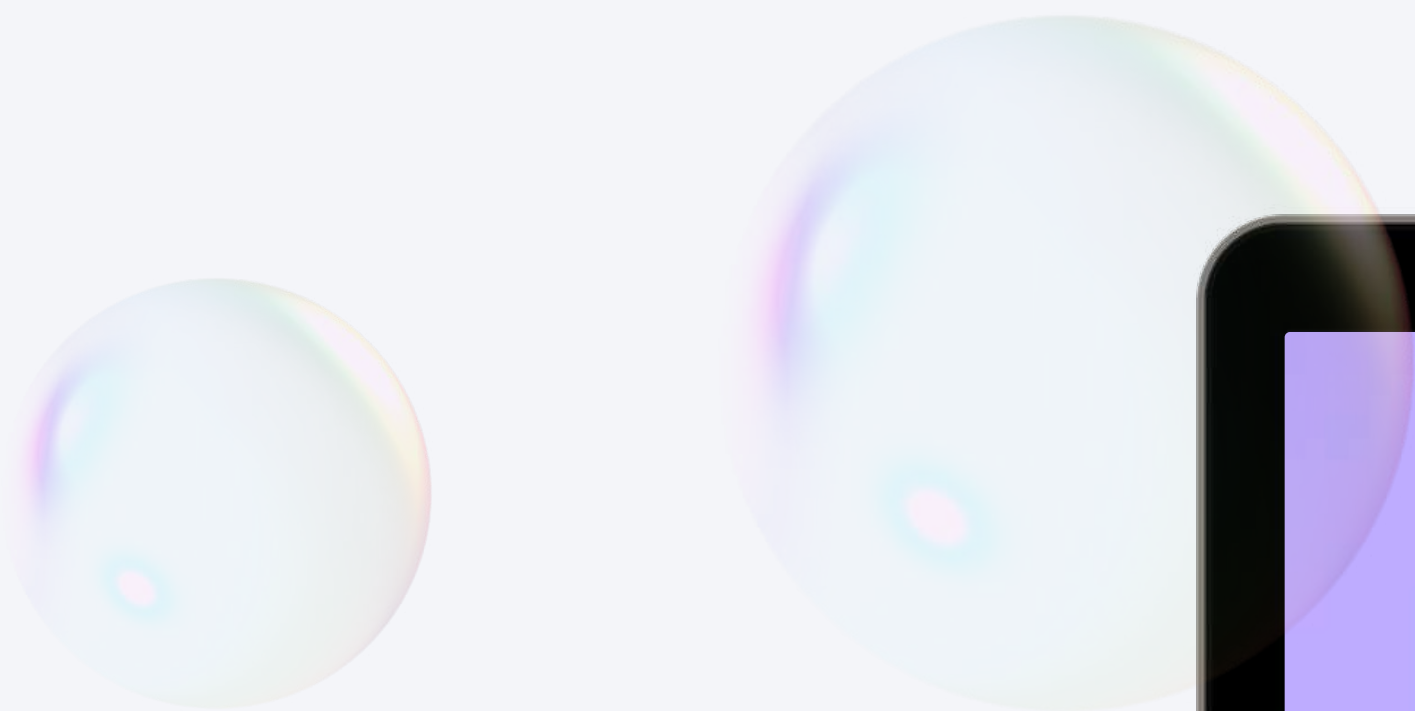

Promptness

We do not get money for the days spent in vain. Payment only for the result, as a consequence - we save the client's time.

Individual approach

Already at the stage of registration of the business you should think about its features. We will take into account every nuance. We will suggest a rational way of registration.

We reduce the tax burden, increase the efficiency of the company!
 Let's bring the best financiers in your community to the project!
 Get down to business while the accounting routine is handled by our Department!

Name Phone

Your name Your phone [Continue](#)

What does it mean to order bookkeeping from niche leaders?

Individual approach to the customer!

A personal accountant who knows every nuance of your project and is ready to explain at any time!

Clear results with a minimum of effort!

Optimization of business processes, which allows you to take a fresh look at even the most familiar moments!

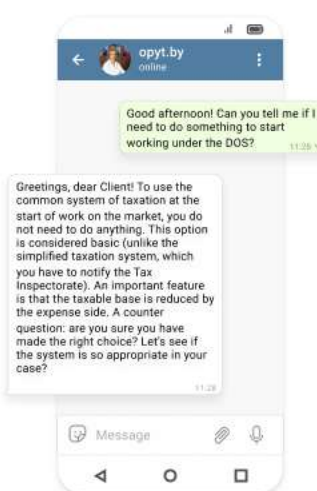

When it's really all inclusive!

A wide range of services - from one-time consultation to full support with reporting.

A personal accountant at your complete disposal!

It will help to save a lot of money!

We assure you that you won't have to do anything illegal. There are plenty of legal ways to reduce the financial burden on your company. Not only do we have information, but we are ready to show in practice how much money can be saved by an accountant. All a businessman has to do is to put matters into reliable hands, to a performer who has dozens of cases in this direction. Scenarios vary from a trivial change of taxation to the fight against hidden payments.

In touch at any time!

Every specialist has a peak of activity - working hours. Our company fully complies with these ideas. But there is a serious caveat. In order to quickly solve this or that issue, you can even go beyond working hours. This is true. We can adjust to the schedule of a major customer. Today, everyone lives on the run. And everyone has a dozen ways to communicate. But the opportunity to talk to experts at any convenient time is a noticeable advantage.

Outsourcing of accounting and tax accounting

You do business. We're in accounting.

[Order the service](#) [About company](#)

Don't want to hire an accountant?

In the presence of a full-time employee:

- The employee may be unqualified
- High wage costs
- For him you have to taxes
- The workplace must be maintained

What can keeping an unskilled worker lead to?

- Excessive waste of time and money.
- Penalties.
- Running behind on accounting.
- Loss of the company's reputation in the eyes of partners.
- Numerous tax audits.
- The risk of losing business.

Can accounting be simplified?

To get rid of unnecessary costs and excessive paperwork, please contact the Office in Minsk and Minsk region LLC "Accounting Technologies"

- 01** We will study the nuances of accounting in the area where your interests are represented!
- 02** Reduce the tax burden, increase the efficiency of the company!
- 03** Let's bring the best financiers in your community to the project!
- 04** Get down to business while the accounting routine is handled by our Department!

Team

We believe that a worthy team is necessarily a combination of experience that comes with years, and the excitement inherent in the young. There is a place in our staff for those who have just graduated well, and those who have repeatedly proved their own professionalism in practice. Add to that the lively atmosphere, which is remembered by everyone who crossed the threshold of our office!

We can work with you if required:

- We're right for you. We're not right for you.

- Full accounting support (outourcing, turnkey).
- One-time accounting advice in the context of Belarusian realities.
- Independent audit of the state of affairs in the accounting department of your organization.
- Examination of existing documentation or preparation of any documentation from scratch.
- Restoration of accounting after a negligent employee.
- Setting up accounting at the start of work on the Belarusian market.
- Performance of separate accounting operations in the course of business.

So, how to start a business from scratch?

Starting your own business is not always a complicated and confusing process, but it does require a lot of attention and responsibility. Here are the first and most important 7 steps to take when starting your company from scratch.

Stages of work

1 It all starts with an idea

If you're thinking about starting a small business, you probably already have an idea of what you want to sell or what market to enter. Do a thorough analysis of existing companies in your chosen industry. Find out what the current brand leaders are doing and figure out how you can do better. If you think your business can offer something that other companies don't (or the same thing, only faster and cheaper), you have a clearly articulated idea and are ready to create a business plan.

2 Figure out how to gain a foothold in the market

One of the first things you should investigate as an entrepreneur is how you can implement your business idea in the future. You need to be careful about the process of creating a business name: check whether the name is unique in your sector, does not mean something completely different or is negative in another language, as you may want to trade abroad in the future.

If you are developing a product which you think is new to the market, you need to make sure it hasn't been invented by someone else before you, so as not to infringe on copyrights. If you plan to make money from photography, writing, fashion or other creative industries, you should consider registering your copyrights and possibly patenting your designs. This way you protect your product and in the future make money from your creativity by licensing and franchising your ideas or inventions. Securing your intellectual property can also add value to your business when you are looking for investors or planning to sell it.

3 Develop a business plan

Once you've formulated your idea, you need to ask yourself some important questions:

What is the purpose of your business?
Who will you be selling to? What are your end goals?
How will you finance your start-up costs?
These questions can be answered in a well-written business plan.

Many young companies fail to start selling faster without thinking about the business aspects. You need to find your target customer base, who will buy your product or service? If you cannot find evidence that there is demand for your idea, then what is the point?

Do market research:
Conducting thorough market research on your industry and analysing potential customers is an important part of developing a business plan. This includes conducting surveys, focus groups, questionnaires, etc.

Market research helps you understand your target customer - their needs, preferences and behaviour - as well as your industry and competitors. For a business to be successful, it must offer something new that is not on the market. This has a significant impact on your position among your competitors and allows you to deliver unique value to potential customers.

A business plan helps you understand where your company is going, how it will overcome any challenges and what you need to sustain it.

4 Assess your financial situation

Again, this is not the most "attractive" part of running a small business, but it is very important nonetheless.

So, you've developed your business plan, and you need to do a financial assessment. This should include the amount of funding you will need to get your business off to a good start.

Assess your financial situation
Again, this is not the most "attractive" part of running a small business, but it is very important nonetheless. So, you've developed your business plan, and you need to do a financial assessment. This should include the amount of funding you will need to get your business off to a good start.

Friends and family
They can be a good source of funding for your business if they see a prospect in it. Tell everyone you know about your idea. Show them a detailed business plan so you don't have to be unsubstantiated. Then invite them to become "investors" in your business, tell them the amount they need and what they will get in return for their investment.

Lend from a bank
These people will gladly lend you money when you don't need it, but suddenly they get stingy when you really need a loan! This is where you need to be prepared. You can discuss your business plan with an expert, perhaps even improve it, before approaching a bank or a professional investor. They will want to examine your plan in great detail, checking all the figures and data, so you should make sure to anticipate everything beforehand.

5 Complete the state registration

As mentioned earlier, different types of business entities have different administrative requirements. Business Kwartal company will ease you from problems with paperwork and queries at various state institutions and will help you register your business quickly and easily.

6 Assemble your team

One of the first things you should research as an entrepreneur is how you can implement your business idea in the future. You have to be careful about the process of creating a business name: check whether the name is unique in your sector, does not mean something completely different or is negative in another language, as you may want to trade abroad in the future.

If you are developing a product that you think is new to the market, you need to make sure it hasn't been invented by someone else before you, so as not to infringe on copyrights. If you plan to make money from photography, writing, fashion, or other creative fields, you need to think about registering your copyrights and possibly patenting your designs. This way you protect your product, and in the future make money from your creativity by licensing and franchising your ideas or inventions. Securing your intellectual property can also increase the value of your business when you are looking for investors or planning to sell it.

7 Start "selling" your business

Before you start selling your product or service, you need to build your brand and get the attention of customers before you ever open.

Create a logo that helps people easily identify your product, use it on all platforms, including the company's official website. Use social media to spread the word about your new business, perhaps as an advertising tool to offer coupons and discounts to subscribers. Don't forget to constantly update your information online as well, to keep you interesting to read.

Creating a marketing plan is essential to building a customer base. This process, especially in the beginning, is just as important as providing a quality product or service.

Starting a business from scratch can be one of the most rewarding experiences a person can have in a lifetime.

But do you know what's even more rewarding? Having a successful business that is profitable and provides a good source of income for you, your employees and their family.

Reviews

All reviews

I found out about the company "Business Kwartal" from the internet and decided to turn to them for help in opening a beauty salon and organizing its work. The cooperation turned out to be successful and fruitful. In the shortest time frame a professional business plan was developed and a full set of permits. I selected a well located room, helped equip it and launched an advertising campaign.

In the beauty industry, qualified staff is important. It is difficult to find good customers, but the staff were able to do it. I'm very happy to work with them and would recommend them to anyone I know.

Ksenya Rogova
Beauty industry

I really liked the work of "Business Kwartal". I don't regret that my partner and I turned to them. They did all the work for us to open a cafe: they developed a business plan, found a room, helped us to get permits in a short time, coordinated all the repair work, found and supervised the construction team.

Company consultants supervised every stage of preparation to the opening and provided professional assistance on all issues. In addition, they helped us choose the furniture and equipment at the best prices. Cooperation with the company has saved us a lot of time and money. We hope to continue to cooperate fruitfully, we think after a while to open another cafe in another area.

Alexey Kopylov
Food service

It's a pleasure doing business with the professionals. Staff at "Business Kwartal" are there. They did all the work for us to open a cafe: they developed a business plan, found a room, helped us to get permits in a short time, coordinated all the repair work, found and supervised the construction team.

Company consultants supervised every stage of preparation to the opening and provided professional assistance on all issues. Northern House

Construction work with the company "Northern House" Ltd.

Quality building work and earthwork mean more to construction than you might imagine. Building construction depends not only on the architectural layout, but also on the study of the land and the choice of terrain. Digging, loosening, and other soil work have a positive effect on how the building will stand, the road will lie. The more the earth is loosened, the more even it will then be compacted. Then the structures will stand still and firmly in the ground for many years.

The vision

To bring Ethereum into the mainstream and serve all of humanity, we have to make Ethereum more scalable, secure, and sustainable.

More scalable

Ethereum needs to support 1000s of transactions per second, to make applications faster and cheaper to use.

More secure

Ethereum needs to be more secure. As the adoption of Ethereum grows, the protocol needs to become more secure against all forms of attack.

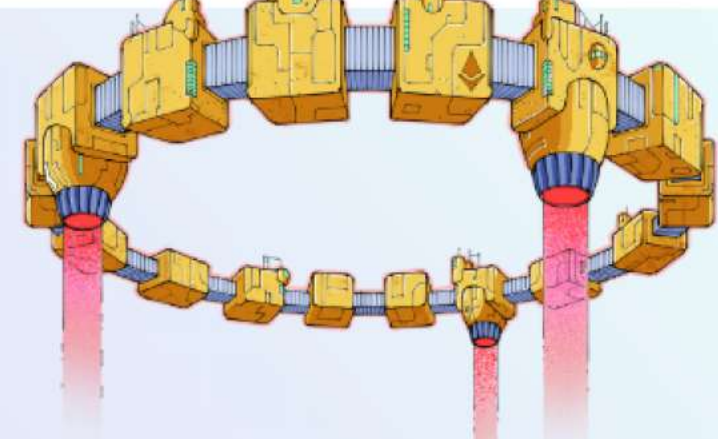

More sustainable

Ethereum needs to be better for the environment. The technology today requires too much computing power and energy.

Dive into the vision

How are we going to make Ethereum more scalable, secure, and sustainable? All while keeping Ethereum's core ethos of decentralization.

[More on the Eth2 vision](#)

The Eth2 upgrades

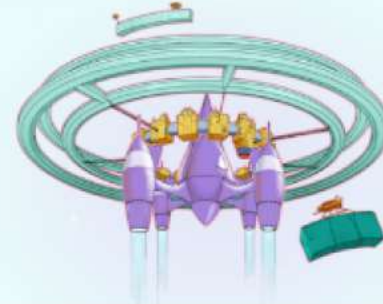

Eth2 is a set of upgrades that improve the scalability, security, and sustainability of Ethereum. Although each is being worked on in parallel, they have certain dependencies that determine when they will be deployed.

The Beacon Chain

The first Eth2 addition to the ecosystem. The Beacon Chain brings staking to Ethereum, lays the groundwork for future upgrades, and will eventually coordinate the new system.

THE BEACON CHAIN IS LIVE

The merge

Mainnet Ethereum will need to "merge" with the Beacon Chain at some point. This will enable staking for the entire network and signal the end of energy-intensive mining.

ESTIMATE: 2022

Shard chains

Shard chains will expand Ethereum's capacity to process transactions and store data. The shards themselves will gain more features over time, rolled out in multiple phases.

ESTIMATE: 2022

Want to help with Eth2?

There are plenty of opportunities to weigh in on the Eth2 upgrades, help with testing, and even earn rewards.

[Get involved](#)

This is not the official roadmap. This is how we view what's happening based on the information out there. But this is technology; things can change in an instant. So please don't read this as a commitment.

Staking is here

Key to the Eth2 upgrades is the introduction of staking. If you want to use your ETH to help secure the Ethereum network, make sure you follow these steps.

Building DeFi Infrastructure

[INST](#) [APP](#)

The world's most advanced platform to start leveraging the full potential of Decentralised Finance.

[Dashboard](#)

[Documentation](#)

Total Value Locked
\$12,167,766,418

DeFi Smart Accounts

Smart contract account owned by the users to manage & optimize funds across any number of protocols

100% trustless

We ensure that the system is 100% trustless and only you've access to your funds.

Built for developers

Designed for developers to build extensible use-cases and models with maximum security.

DESIGNED FOR DEVELOPERS

Developer First

Build compelling use-cases and monetize their models to earn money by serving your users with high reliability.

- Start with your own use case
- Execute rapidly with Javascript
- Open to all developer team sizes
