

Twitter thread sample (for portfolio)

What is Solana and Why It's So Fast?

1. Let's talk about Solana — one of the fastest and most popular blockchains in crypto. Whether you're into NFTs, DeFi, or meme coins, you've probably heard of it. Here's why it stands out. 🙌

2. Speed 🚀

Solana can handle 65,000 transactions per second, while Ethereum averages about 15–30. That's why Solana apps feel super fast.

3. Low Fees 💰

Each transaction costs around \$0.00025 — so cheap, you can use it all day without spending \$1.

4. Great for NFTs 🎨

NFT platforms like Magic Eden and Tensor are built on Solana. This makes minting and trading smooth and cheap.

5. Solana's Secret Sauce? Proof of History 🕒

Unlike other blockchains, Solana timestamps transactions before adding them to the chain. This lets it process in parallel (not one by one).

6. Is It Safe? 🔒

Solana has had network outages in the past but has improved a lot in reliability. It's now one of the top chains by daily users.

7. In summary:

- ✅ Fast
- ✅ Cheap
- ✅ NFT-friendly
- ✅ Developer-focused

Are you bullish on Solana? 🧠
