

CRUD

SYSTEM AND REGISTRATION

WITH DJANGO

Hello!!! I need a simple Django web application where I can create, view, edit and delete records (CRUD). I also need a user registration and login system so that the data is only available to authorized users.

This will be an internal system for managing objects (for example, products, requests, or orders - any abstract entity will do, the main thing is to show the CRUD logic).

Hello! I am ready to fulfill your task, send me your project.

Sign Up

Initially, we developed user registration and authorization, which is stored in the built-in Django Admin panel.

This is a very convenient and secure solution for using the following projects

How color affects mood

anna.k | May 7, 2025, 1:07 p.m.

Did you know that blue can be calming and red can stimulate activity? In this article, I'm going to talk about the psychological impact of colors on a person and how to use them in everyday life, from choosing clothes to interior design.

Status: ▼

Save

We also developed a CRUD system (creating, viewing, updating, and deleting user-generated posts).
