

Portfolio Project: E-Commerce Backend API with Node.js and MySQL

Project Summary

Built a scalable backend for an e-commerce application using Node.js and MySQL. Implemented modules for product management, order processing, and user authentication.

Key Features

- Product CRUD operations
- User registration and login
- Order management with status tracking
- JWT Authentication
- Modular service architecture

Tech Stack

- Node.js
- Express.js
- MySQL
- JWT
- Sequelize ORM
