01 Web 1, 2 and 3

02 The path to rise above all in web3

03 20 ideas to get rich with the web3

04 Conclusion

WEB 1, 2 AND 3

WEB 1

Web 1.0 refers to the early version of the World Wide Web that emerged in the 1990s.

It was characterized by a limited number of static websites with limited interactivity and user-generated content.

The majority of the information available on the web was created and published by professionals and experts, and users could only access and view the content.

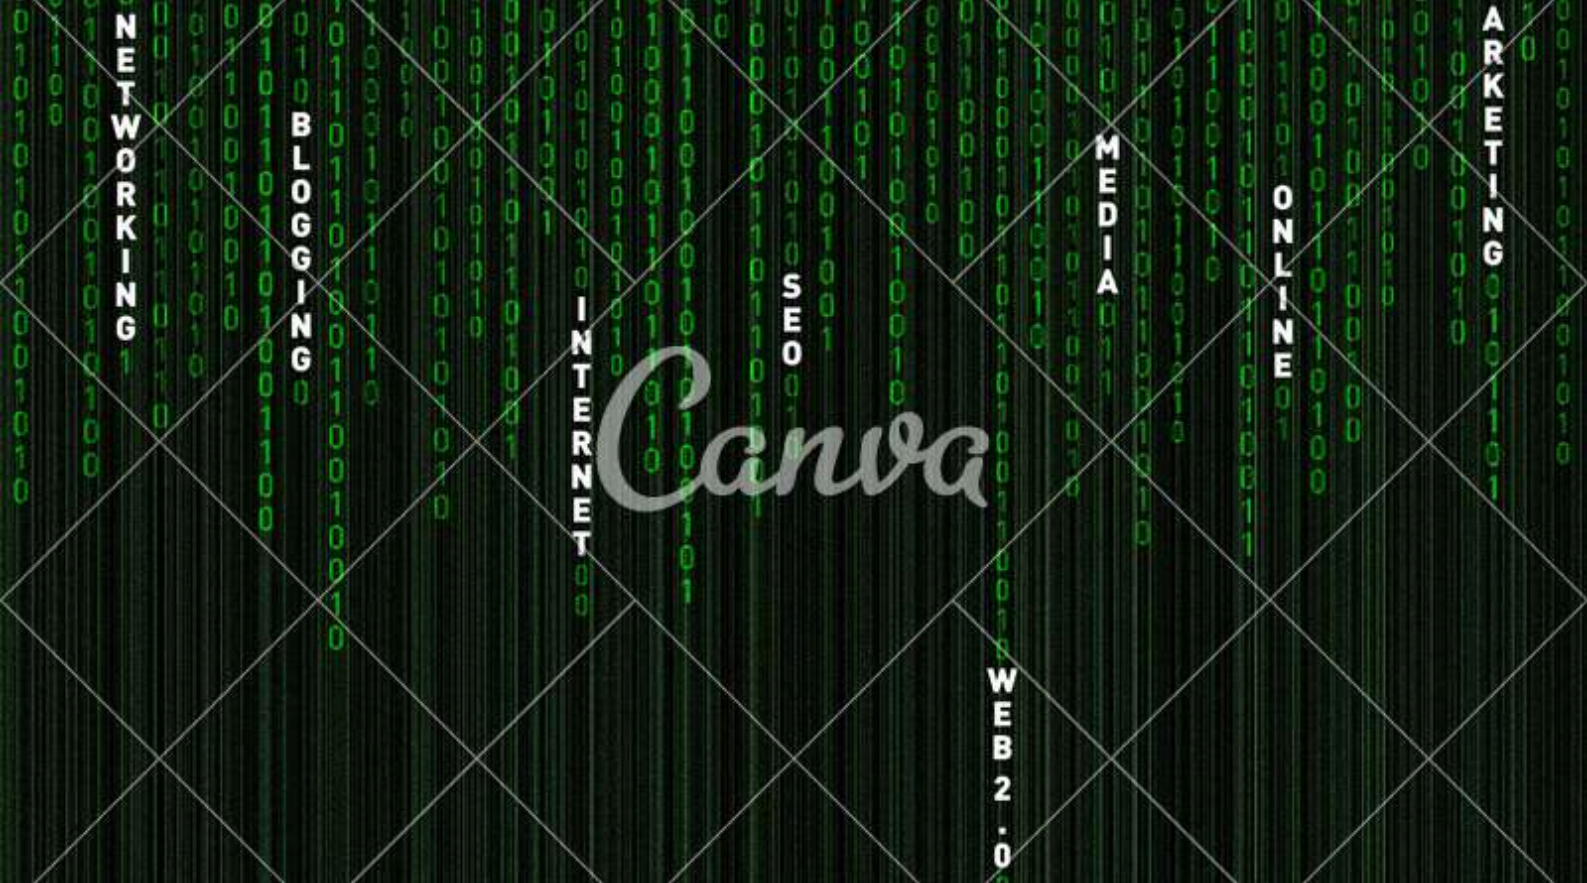

Early web browsers such as Netscape Navigator and Internet Explorer provided limited access to the web, and the slow internet speeds at the time further limited the online experience.

Despite its limitations, Web 1.0 paved the way for the development of the more advanced and interactive web we have today.

WEB 2

Web 2.0 refers to the second generation of the World Wide Web that emerged in the early 2000s.

This new version of the web emphasized user-generated content, collaboration, and interactivity. The rise of social media platforms such as Facebook, Twitter, and YouTube allowed for the creation and sharing of content by users, rather than just by professionals and experts.

The advent of broadband internet and more advanced technology allowed for a more seamless online experience, with increased speeds and improved connectivity.

Web 2.0 also marked the rise of Web applications, cloud computing, and mobile devices, which transformed the web into a more dynamic and interactive platform.

Overall, Web 2.0 marked a major shift in the way that people use and interact with the internet.

WEB 3

Web 3.0 refers to the next generation of the World Wide Web, which is focused on the concept of a decentralized, semantic web.

This new version of the web aims to provide more intelligent and intuitive services by using advanced technologies such as artificial intelligence, machine learning, and the blockchain.

The goal of Web 3.0 is to create a web that is more secure, private, and user-centric, where users have greater control over their data and online experiences. This new web will be powered by decentralized systems, where data and information is stored on a network of nodes rather than on centralized servers.

The emergence of Web 3.0 will have far-reaching implications for various industries and is expected to bring about new and innovative applications and services.

THE PATH TO RISE ABOVE ALL IN WEB3

The Pro Bono method: To begin, it is crucial to understand how the whole thing works. Start with the "pro bono" model, which means agreeing to work for free at first.

It is important to understand the issues of different projects by exploring the discussions on the forums. Have conversations with founders, moderators, and collaboration managers.

Invest a small amount of money in ICOs or NFT projects to gain an understanding of how they work. Offer to help projects for free to improve your knowledge.

This step is often ignored, but it's worth trying. At the same time, it is highly recommended to develop your network and gradually build a web3 influencer business.

Pro active: At this point, you should have a good understanding of the ecosystem.

Now it's time to get paid. This is where you can start working as a web3 service provider, where you can expect to earn between 3,000 and 10,000 euros per month.

You can start as a collaboration manager or web3 community manager, or as a community builder, Discord manager, web3 chatter or ghostwriter, etc.

Building and aiming for a million: At this point, it's serious. It's time to put processes in place to grow your web3 business.

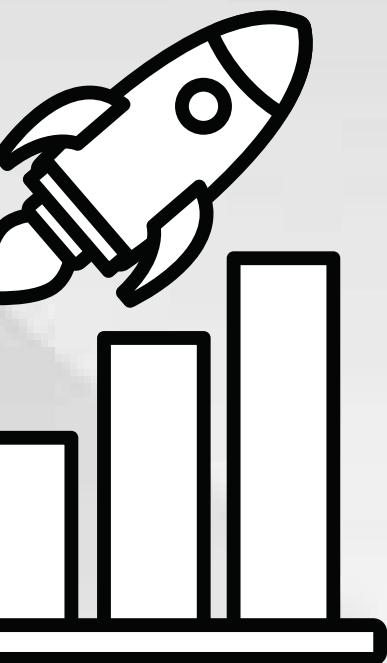

The goal is to reach monthly revenues of 20,000 to 100,000 Euros. This is possible and achievable. But it is also at this stage that you can partner to build more ambitious projects, such as a web3 agency or technology in the ecosystem.

The technology may be complex, but it is what will allow you to reach millions.

20 IDEAS TO GET RICH WITH THE WEB 3

1. WEB3 PROJECT MANAGER

Generally, the PM is an intermediary between a Dapps developer and a client. He has an account on Fiverr.

The job is to facilitate communication and collaboration between these two parties to ensure the successful completion of the dapp project.

In short, the role of the intermediary is to guarantee customer satisfaction by ensuring that the development of the dapp takes place in an effective and efficient manner.

Here, the hard part is to find clients.

2. CRYPTOCURRENCY TRADER

The classic. Here are some basic rules :

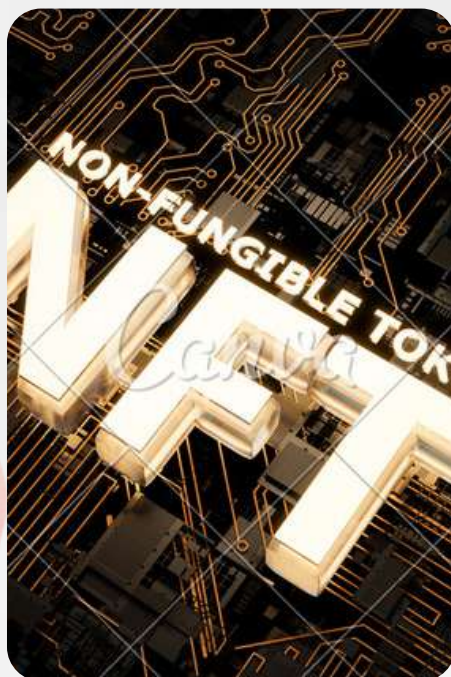

Be patient : Do not make impulsive decisions. Wait for profitable investment opportunities rather than reacting to market fluctuations..

Diversify your portfolio.

DYOR : Do Your Own Research. Follow the team, ask for their past, use token sniffer to check the contract... The more you know, the less you lose.

Have a strategy.

3.CREATE A NFT COLLECTION

Choose a Compatible NFT Platform

Prepare Your Creation (Make sure your creation is unique and that you have the rights to it.)

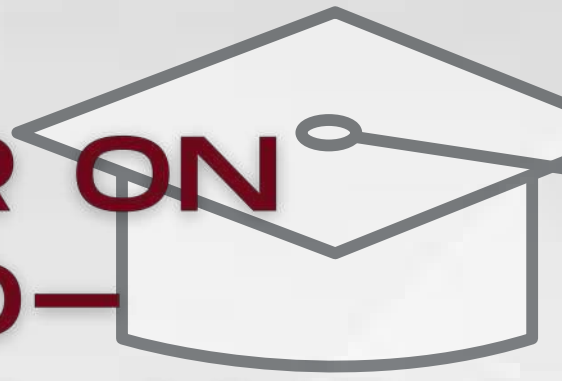

Create Your NFT

Put Your NFT Up for Sale (listing)

Monitor Auctions

But remember : community is the key.

4. TRAINER ON CRYPTO- CURRENCIES AND BLOCKCHAIN

You must have skills learned at work that you can link to web 3 (writing emails, prospecting, retrieving data online from the Internet).

Make an ebook out of it, and learn how to sell on the internet (there are some great videos to train you).

You will then be able to generate your first money.

5.COMMUNITY MANAGER WEB 3

I won't go over what a community manager is. Approach potential clients, and invest in the projects you find promising.

Specialize in one social network first.

6.WEB3 MODERATOR

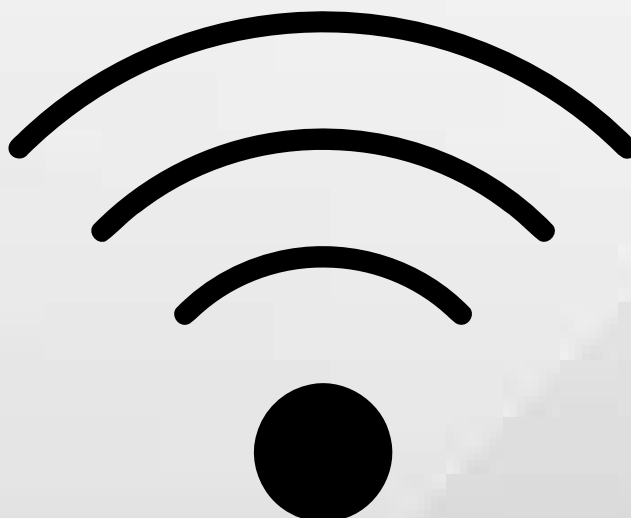

The same issues as the community manager.

Being a good community moderator means establishing transparent communication, encouraging participation, monitoring compliance, being diplomatic about conflicts, learning from the community and maintaining a healthy and respectful atmosphere.

7. WEB3 DATA EXTRACTOR

A business I am currently testing.
Train yourself in web scraping,
and offer your services to
companies in the sector.
Generally, a database containing
10000 contacts costs about 1000
dollars.

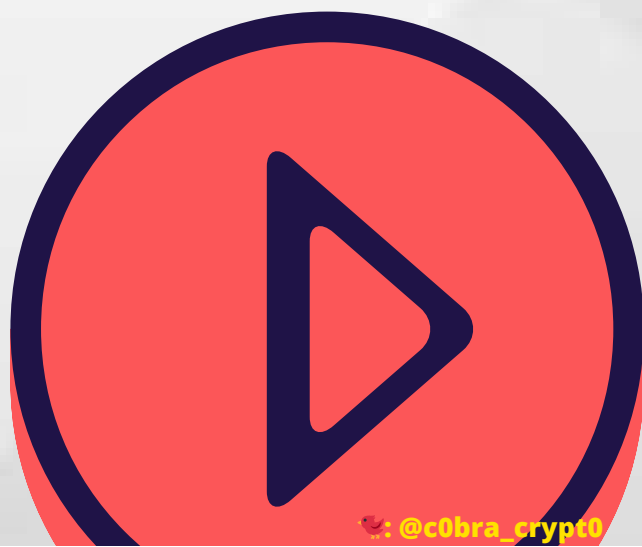

8. PLAY TO EARN BOY

Be careful, few games allow you to earn money to live. Generally, this type of remuneration is very promising during bull markets.

I personally play Gods Unchained.

9. COLLAB MANAGER WEB3

Here you are paid to connect 2 web3 projects. Depending on the impact of the projects on the ecosystem, you can make a lot of money.

10.BUG HUNTER WEB3

The "Decentralized Bug Buster" is a professional responsible for finding and fixing errors and anomalies in decentralized web3 based applications.

He/she must have a solid understanding of blockchain and smart-contracts technology, as well as coding and debugging skills to locate and fix bugs in decentralized systems.

This job requires attention to detail, the ability to solve complex problems, and an understanding of the potential consequences of errors in systems.

The decentralized bug hunter plays a key role in ensuring the reliability and security of applications, ensuring that users can interact with them with confidence.

11.INTERNET DETECTIVE / REPUTATION BREAKER

Search for suspicious transactions, investigate a project... And yes, some people are willing to pay to see their opponents bite the dust.

"Experts" in creating fake accounts to lower online ratings, writing tweets denigrating a project.

I personally don't get involved in this.

12.WEB DESIGNER

There are hundreds of tokens launched per day. There is a team that needs web design.

And then, between all-in-one apps and AI, you don't need to code anything anymore.

13.WEB3 LISTENER

You know, a lot of people are losing money in the crypto world. It's a real pain in the a**. It's important to listen to them. You can offer your services on a specialized platform like Fiverr.

To be a good listener:
-> empathy
-> don't judge
-> give feedback

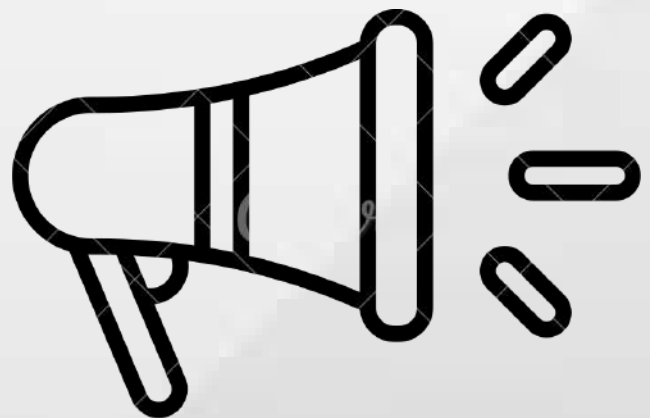

And if you think this is a joke, offer your services and watch the tickets come in.

14.EVENT ORGANIZER

Organizing an event requires exceptional planning skills. You need to call on several service providers at the same time.

The ecosystem being in full effervescence, this business is likely to explode very soon.

15. PERSONAL SHOPPER OF THE METAVERSE

I confess: I made that one up.
But in the near future, why not.

16. CHATGPT PROMPTS MAKER

Combine the power of AI with
blockchain.

Create ebooks quickly, do
accurate research on a subject
for businesses or individuals on
the web3. You are early.

17. WEB3 PROJECT REVIEWER

Like movie reviews but for web3 contracts. Requires good skills in coding.

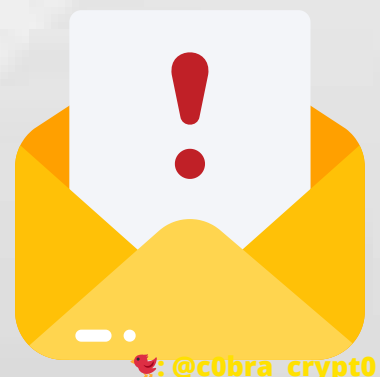

18. SPAM MASTER

A bad person pays you to spam a project for good or bad.

Another name is web chatter. Being a chatter is about being a model member of a community.

He or she will interact daily within the community platform, either in writing or in voice chat rooms.

19. PERSONNAL ASSISTANT

A personal assistant in Web 3 is a person who helps users manage their online activities and accomplish specific tasks using decentralized technologies such as blockchain.

This person can be an employee of a company or a freelancer who provides services as a trusted third party for online transactions and activities. Personal assistant tasks may include managing finances, scheduling appointments, finding information, sending messages, etc.

Required skills include a solid understanding of blockchain technology, effective communication, time management, and organization. Personal assistants in Web 3 must be able to work independently and manage the activities of multiple clients at once.

Paragraphs fully realized with Chat GPT.

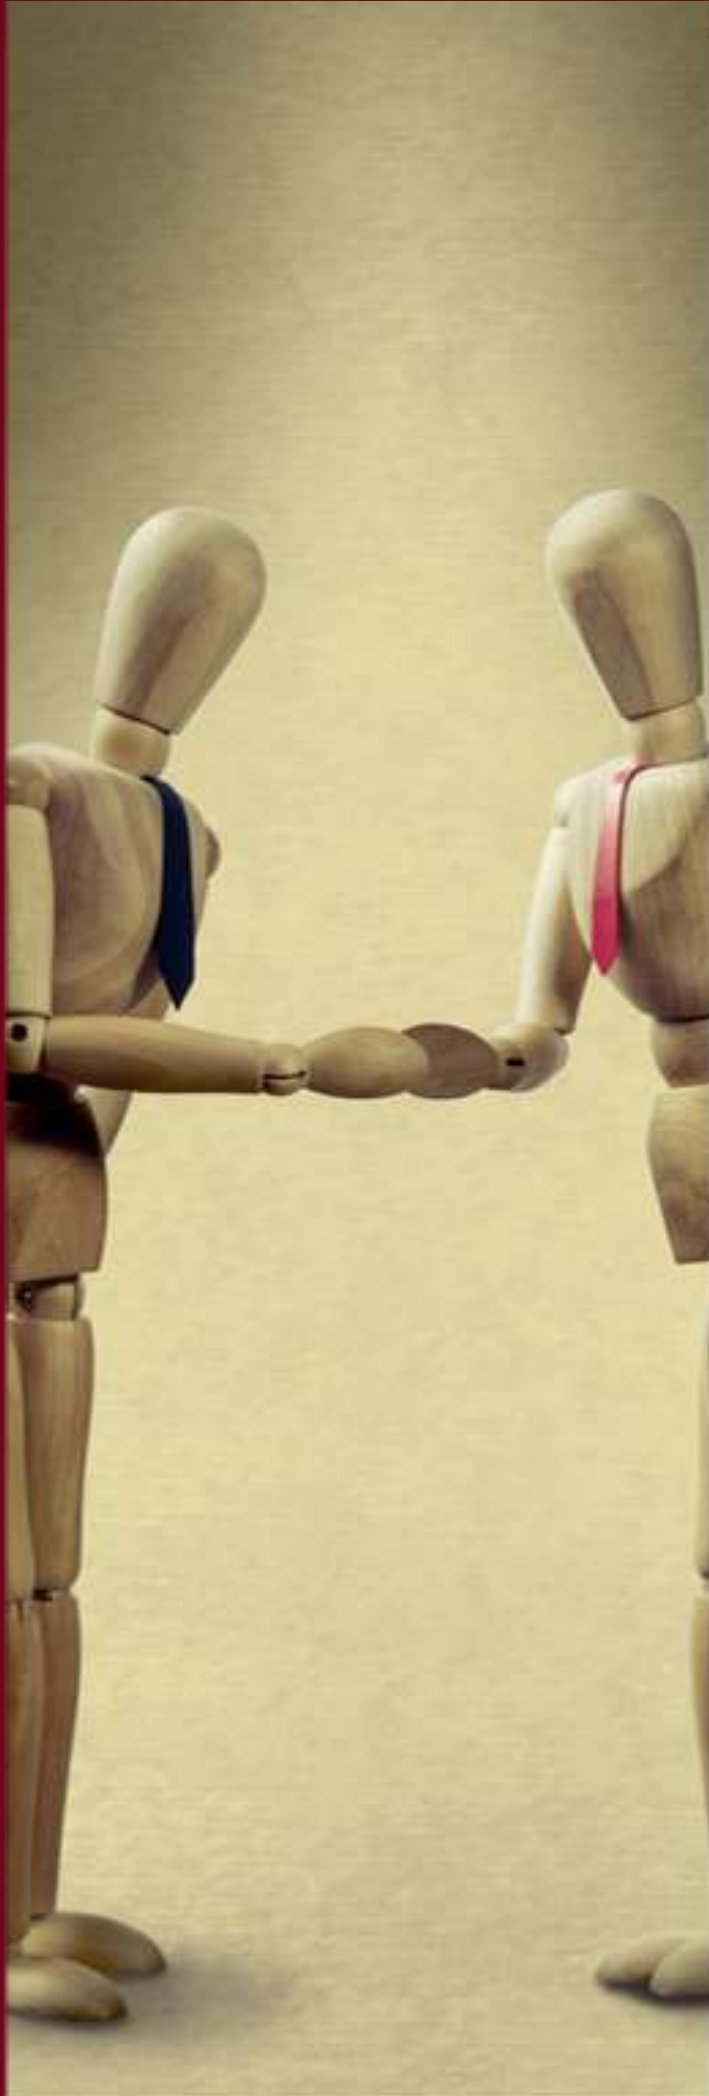

20. PRINTER

NFTs, metaverse objects, certificates... The need for 3D printing will become huge in the near future. The entrepreneurs who will place themselves on this niche very early will generate a lot of money.

CONCL
USION

Thank you for reading this short document. To leave well enough alone, here are 3 little known projects that I think will do a x100 in the near future:

– the SOWL token, a project aiming to give tokens to users of an application aiming to make them learn online. I did a x8 when the token was launched. [www.sowltoken.com]

– The LUCKY ROO token, the future of decentralized casinos. Simple and effective. [luckyroo.io]

– The GALEON token, for "The first Electronic Health Record that generates highly structured medical data and trains medical AI thanks to Blockchain." [www.galeon.care/en/]

There is no financial advice. Good luck, may the cryptos be with you.
