

White Paper

Utility Token Project

A white paper refers to an article that contains very useful information for businesses, and the purpose of writing it is to understand a specific problem and make a correct decision about a problem or to provide information that helps the selection process about buying a product or receiving a service. Complicated and expensive become simpler.

A white paper is something between an article and an advertising brochure. This document contains quite useful information and at the same time leads to the best decision to purchase a particular product or service. In business, a white paper is somehow closer to a marketing presentation, in fact, it is a tool for persuading customers and partners and promoting a product or a vision.

Most white papers are written and published in the technology sector because white papers are mostly used by companies that produce and sell software and hardware.

But in general, activists in the field of business are the main sponsors or publishers of white papers.

In order for a white paper to be valid and properly written, it must have a series of characteristics. According to HubSpot's Lindsay Colwich, a good white paper should follow these guidelines:

Paper length: A white paper should not be less than six pages, and should also include images, charts, and authoritative sources. If the topic requires more detail, articles can be up to 50 pages

Structure: Usually, a white paper should include a title page, table of contents, short executive summary, introduction, several pages of instruction on how to solve the problem for users, several pages on its solutions, and a conclusion.

Density: usually denser than an eBook. White papers aren't supposed to be easy. In fact, people have to read them more than once to be able to extract all the information.

Format: The main format should be PDF and in vertical orientation

Style: A white paper should be professional, serious, and well-designed with fluent writing.

White paper in the world of cryptocurrency

The world of digital currencies or rather cryptocurrencies, just like other businesses and financial industries, makes a lot of use of white papers. Almost all projects that have come to fruition through cryptocurrencies, from Bitcoin to today's ICOs, all have a white paper.

The points mentioned in a white paper in this field usually include the project goal, project schedule, time and date of fundraising, team members and their experiences, road map, and how to implement the plan. In some cases, if necessary, they present the white paper in two versions, summarized and complete.

A white paper in the world of cryptocurrencies is a document that contains an outline of the problem that the project is trying to solve, as well as the solution to this problem. A white paper can be a detailed description of the project's product, its architecture, and its interaction with the project's users.

These articles are usually available to the public and by reading them, you can get a lot of information about the design or idea. For example, the Bitcoin White Paper was made publicly available in 2008 by its creator Satoshi Nakamoto and is still available today.

WELCOME TO THE NEW FINANCIAL WORLD

WHY IS FUNCTIONAL TOKEN IMPORTANT?

Hey there! Take a look at this awesome sample of a utility token project we've put together. This token is perfect for companies and institutions looking for a safe and reliable payment option or for those wanting to add extra value to their business. We've completed all the hard work quickly and affordably, so we're excited to offer this project to anyone interested - whether that's companies, individuals, organizations, or websites. Let us know if you have any questions or if you're ready to dive in!

SEE WHAT WE HAVE IN MIND FOR UTILITY TOKENS

UNLOCKING THE POWER
OF SECURE PAYMENTS
AND ADDED VALUE

TRANSFORMING THE WAY
BUSINESSES
TRANSACTION AND GROW

EXPERIENCE THE CONVENIENCE
AND SECURITY OF OUR
UTILITY TOKEN

INNOVATIVE SOLUTIONS FOR
MODERN BUSINESSES
AND INSTITUTIONS

EMPOWERING BUSINESSES
WITH THE ULTIMATE
PAYMENT OPTION

UTILITY TOKEN

**ONE ARROW
AND SEVERAL TARGETS**

**WE HELP YOU
ACHIEVE ALL YOUR GOALS
BY CREATING A UTILITY TOKEN
JUST STATE YOUR GOALS**

Reza Abbasi

Crypto Creator

About me

I am Reza Abbasi, born in 1971
Entrepreneur
Project designer
Project manager
Project Consultant
Crypto creator
The writer

I have been a designer and consultant for various projects for 25 years

I have been specializing in cryptocurrency for about seven years

The result of this is the creation of 2 projects in the field of cryptocurrency

I have also written a book on cryptocurrencies
Currently, my work focus is on the field of cryptocurrencies

what is in our power

Project design includes:

- 1- Research and study
- 2- Field investigation
- 3- Feasibility of project implementation
- 4- Writing texts
- 5- Budgeting
- 6- Plan implementation schedule
- 7- Preparation of statistical tables
- 8- Setting the white paper
- 9- Road map design
- 10- Project ecosystem design

Token design and construction:

- 1- Writing specific token codes
- 2- Compiler and code deployment
- 3- Deployment of codes in the blockchain network
- 4- Verification of codes in the blockchain network
- 5- Transfer all tokens to the owner's wallet
- 6- Listing in a decentralized exchange
- 7- Listing on the Coin Market Cap site
- 8- Listing in centralized exchanges

Web design:

- 1- Complete UI and UX design
- 2- Creating content for the site
- 3- Creating social networks
- 4- Creating content for social networks
- 5- Token and site logo design
- 6- Token airdrop program design
- 7- Buying domain and hosting
- 8- Loading the site in Word Press
