

Portfolio Project: Secure REST API with Node.js

Project Summary

Developed a secure REST API using Node.js, Express.js, MongoDB, and JWT for authentication. This project demonstrates end-to-end backend development including user registration, login, and token-based access protection.

Key Features

- User Registration & Login
- Password hashing with bcrypt
- JWT-based authentication
- MongoDB integration using Mongoose
- Structured folder setup (routes, controllers, models)

Tech Stack

- Node.js
- Express.js
- MongoDB
- Mongoose
- JSON Web Tokens (JWT)
- bcrypt
